[📖 README](#) [💡 Code of conduct](#) [👤 Contributing](#) [⚖️ MIT license](#) [⚖️ License](#) [⚖️ Security](#)

Installable GitHub library of 1,493+ agentic skills for Claude Code, Cursor, Codex CLI, Gemini CLI, Antigravity, and other AI coding assistants.

You can use this repo to install a broad multi-tool skill library, start from role-based bundles, or jump into workflow-driven execution for planning, coding, debugging, testing, security review, infrastructure, product work, and growth tasks. The root README is intentionally a high-signal landing page: understand what the project is, install it quickly, choose the right tool path, and then follow deeper docs only when you need them.

About

Installable GitHub library of 1,400+ agentic skills for Claude Code, Cursor, Codex CLI, Gemini CLI, Antigravity, and more. Includes installer CLI, bundles, workflows, and official/community skill collections.

Current release: V11.10.0. Trusted by 39k+ GitHub stargazers, this repository combines official and community skill collections with bundles, workflows, installation paths, and docs that help you go from first install to daily use quickly.

Why This Repo

- **Installable, not just inspirational:** use `npx antigravity-awesome-skills` to put skills where your tool expects them.
- **Built for major agent workflows:** Claude Code, Cursor, Codex CLI, Gemini CLI, Antigravity, Kiro, OpenCode, Copilot, and more.
- **Broad coverage with real utility:** 1,493+ skills across development, testing, security, infrastructure, product, and marketing.
- **Faster onboarding:** bundles and workflows reduce the time from "I found this repo" to "I used my first skill".
- **Useful whether you want breadth or curation:** browse the full catalog, start with top bundles, or compare alternatives before installing.

Installation

Most users should start with the full library install and use bundles or workflows to narrow down what to try first.

Full library install

```
# Default: ~/.agents/skills (Antigravity 2.0 global). Use --path for other locations.
npx antigravity-awesome-skills

# Antigravity CLI slash commands (agy): ~/.gemini/antigravity-cli/skills/*.md
npx antigravity-awesome-skills --agy
```

The npm installer uses a shallow, release-pinned clone by default so first-run installs stay lighter than a full repository history checkout while matching the published npm package version. Use `--tag main` only when you intentionally want the current repository tip.

Verify the install

```
test -d ~/.agents/skills && echo "Skills installed in ~/.agents/skills"
```

Run your first skill

```
Use @brainstorming to plan a SaaS MVP.
```

Prefer plugins for Claude Code or Codex?

- Use the full library install when you want the broadest catalog and direct control over your installed skills directory.
- Use the plugin route when you want a marketplace-style, plugin-safe distribution for Claude Code or Codex.
- Read [Plugins for Claude Code and Codex](#) for the full breakdown of full-library install vs plugin install vs bundle plugins.

Choose Your Tool

Use the same repository, but install or invoke it in the way your host expects.

Tool	Install	First Use
Claude Code	<code>npx antigravity-awesome-skills --claude</code> or Claude plugin marketplace	<pre>>> /brainstorming help me plan a feature</pre>
		<pre>@brainstorming help me plan a</pre>

Cursor	<code>npx antigravity-awesome-skills --cursor</code>	feature
Gemini CLI	<code>npx antigravity-awesome-skills --gemini</code>	Use brainstorming to plan a feature
Codex CLI	<code>npx antigravity-awesome-skills --codex</code>	Use brainstorming to plan a feature
Antigravity IDE	<code>npx antigravity-awesome-skills --antigravity</code>	Use @brainstorming to plan a feature
Antigravity CLI (agy)	<code>npx antigravity-awesome-skills --agy</code>	/brainstorming help me plan a feature
Kiro CLI	<code>npx antigravity-awesome-skills --kiro</code>	Use brainstorming to plan a feature
Kiro IDE	<code>npx antigravity-awesome-skills --path ~/.kiro/skills</code>	Use @brainstorming to plan a feature
GitHub Copilot	<i>No installer — paste skills or rules manually</i>	Ask Copilot to use brainstorming to plan a feature
OpenCode	<code>npx antigravity-awesome-skills --path .agents/skills --category development,backend --risk safe,none</code>	opencode run @brainstorming help me plan a feature
Adal CLI	<code>npx antigravity-awesome-skills --path .adal/skills</code>	Use brainstorming to plan a feature
Custom path	<code>npx antigravity-awesome-skills --path ./my-skills</code>	Depends on your tool

- [AI agent skills guide](#)

Quick FAQ

What is Antigravity Awesome Skills?

It is an installable GitHub library of reusable `SKILL.md` playbooks for Claude Code, Cursor, Codex CLI, Gemini CLI, Antigravity, and related AI coding assistants. The repo packages those skills with an installer CLI, bundles, workflows, generated catalogs, and docs so you can move from discovery to daily usage quickly.

How do I install it?

Run `npx antigravity-awesome-skills` for the default full-library install, or use a tool-specific flag such as `--codex`, `--cursor`, `--gemini`, `--claude`, or `--antigravity` when you want the installer to target a known skills directory directly.

Should I use the full library or a plugin?

Use the full library if you want the biggest catalog and direct filesystem control. Use plugins when you want a marketplace-style, plugin-safe distribution for Claude Code or Codex. The complete explanation lives in [Plugins for Claude Code and Codex](#).

Where do I browse bundles, workflows, and the full catalog?

Start with [Bundles](#) for role-based recommendations, [Workflows](#) for ordered execution playbooks, [CATALOG.md](#) for the full registry, and the hosted [GitHub Pages catalog](#) when you want a browsable web UI.

Best Skills By Tool

If you want a faster answer than "browse all 1,493+ skills", start with a tool-specific guide:

- [Claude Code skills](#): install paths, starter skills, prompt examples, and plugin marketplace flow.
- [Cursor skills](#): best starter skills for `.cursor/skills/`, UI-heavy work, and pair-programming flows.
- [Codex CLI skills](#): planning, implementation, debugging, and review skills for local coding loops.
- [Gemini CLI skills](#): starter stack for research, agent systems, integrations, and engineering workflows.
- [AI agent skills guide](#): how to evaluate skill libraries, choose breadth vs curation, and pick the right starting point.

Universal starter skills

- `@brainstorming` for planning before implementation.
- `@test-driven-development` for TDD-oriented work.
- `@debugging-strategies` for systematic troubleshooting.
- `@lint-and-validate` for lightweight quality checks.
- `@security-auditor` for security-focused reviews.
- `@frontend-design` for UI and interaction quality.
- `@api-design-principles` for API shape and consistency.
- `@create-pr` for packaging work into a clean pull request.

Real prompt examples

Use @brainstorming to turn this product idea into a concrete MVP plan.

Use @security-auditor to review this API endpoint for auth and validation risks.

Bundles & Workflows

Bundles help you choose where to start. Workflows help you execute skills in the right order.

Start with bundles

Bundles are curated groups of recommended skills for a role or goal such as `Web Wizard`, `Security Engineer`, or `OSS Maintainer`.

- Bundles are recommendations, not separate installs.
- Install the repository once, then use [docs/users/bundles.md](#) to pick a starting set.
- Good starter combinations:
 - SaaS MVP: `Essentials` + `Full-Stack Developer` + `QA & Testing`
 - Production hardening: `Security Developer` + `DevOps & Cloud` + `Observability & Monitoring`
 - OSS shipping: `Essentials` + `OSS Maintainer`

Use workflows for outcome-driven execution

- Read [docs/users/workflows.md](#) for human-readable playbooks.
- Use [data/workflows.json](#) for machine-readable workflow metadata.
- Initial workflows include shipping a SaaS MVP, security audits, AI agent systems, QA/browser automation, and DDD-oriented design work.

Need fewer active skills at runtime?

If Antigravity starts hitting context limits with too many active skills, the activation guidance in [docs/users/agent-overload-recovery.md](#) can materialize only the bundles or skill ids you want in the live Antigravity directory.

If you use OpenCode or another `.agents/skills` host, prefer a reduced install up front instead of copying the full library into a context-sensitive runtime. The installer now supports `--risk`, `--category`, and `--tags` so you can keep the installed set narrow.

Browse 1,493+ Skills

Use the root repo as a landing page, then jump into the deeper surface that matches your intent.

What you get in this repository

- Skills library in [skills/](#)
- Installer CLI powered by the npm package in [package.json](#)
- Generated catalog and metadata in [CATALOG.md](#), [skills_index.json](#), and [data/](#)
- Hosted and local web app in [apps/web-app](#) and on [GitHub Pages](#)
- Role-based bundles in [docs/users/bundles.md](#)
- Execution workflows in [docs/users/workflows.md](#)
- User, contributor, and maintainer docs under [docs/](#)

Best ways to explore

- Read the full catalog in [CATALOG.md](#).
- Browse the hosted catalog at <https://sickn33.github.io/antigravity-awesome-skills/>.
- Start with [Getting Started](#) and [Usage](#) if you are new after installation.
- Use [Bundles](#) for role-based discovery and [Workflows](#) for step-by-step execution.
- Use [Plugins for Claude Code and Codex](#) when you care about marketplace-safe distribution.

Compare alternatives

- [Antigravity Awesome Skills vs Awesome Claude Skills](#) for breadth vs curated-list tradeoffs.
- [Best Claude Code skills on GitHub](#) for a high-intent shortlist.
- [Best Cursor skills on GitHub](#) for Cursor-compatible options and selection criteria.

Troubleshooting

Keep the root README short; use the dedicated docs for recovery and platform-specific guidance.

- If you are confused after installation, start with the [Usage Guide](#).
- If you integrate antigravity-awesome-skills into a host, read the discovery contract first: [Stable Skills Manifest v1](#).
- For Windows truncation or context crash loops, use [docs/users/windows-truncation-recovery.md](#).
- For Linux/macOS overload or selective activation, use [docs/users/agent-overload-recovery.md](#).
- For OpenCode or other `.agents/skills` installs, prefer a reduced install such as `npmx antigravity-awesome-skills --path .agents/skills --category development,backend --risk safe,none`.
- For plugin install details, host compatibility, and marketplace-safe distribution, use [docs/users/plugins.md](#).
- For contributor expectations and guardrails, use [CONTRIBUTING.md](#), [CODE_OF_CONDUCT.md](#), and [SECURITY.md](#).

Stable Skills Manifest v1

Host integrations should use:

- `skills_index.json` as the canonical array-format manifest.
- `schemas/skills_index.v1.schema.json` for the JSON shape.
- `data/skills_index.json` as the compatibility mirror.

This keeps discovery stable (`id`, `path`, metadata) while ensuring hosts only load `SKILL.md` for requested `@skill-id` values.

Support the Project

Support is optional. The project stays free and open-source for everyone.

- [Buy me a book on Buy Me a Coffee](#)
- Star the repository
- Open reproducible issues
- Contribute docs, fixes, and skills

Contributing

- Add new skills under `skills/<skill-name>/SKILL.md`.
- Follow the contributor guide in `CONTRIBUTING.md`.
- Use the template in `docs/contributors/skill-template.md`.
- Validate with `npm run validate` before opening a PR.
- Keep community PRs source-only: do not commit generated registry artifacts like `CATALOG.md`, `skills_index.json`, or `data/*.json`.
- If your PR changes `SKILL.md`, expect the automated `skill-review` check on GitHub in addition to the usual validation and security scans.
- If your PR changes skills or risky guidance, manual logic review is still required even when the automated checks are green.

Community

- [Discussions](#) for questions, ideas, showcase posts, and community feedback.
- [Issues](#) for reproducible bugs and concrete, actionable improvement requests.
- [Follow @AASkills on X](#) for daily skills, practical workflows, and example prompts from the repo.
- [Follow @sickn33 on X](#) for project updates and releases.
- `CODE_OF_CONDUCT.md` for community expectations and moderation standards.
- `SECURITY.md` for security reporting.

Credits & Sources

We stand on the shoulders of giants.

👉 [View the Full Attribution Ledger](#)

Key contributors and sources include:

- The Open Source Community

This collection would not be possible without the incredible work of the Claude Code community and official sources:

Official Sources

- [anthropics/skills](#): Official Anthropic skills repository - Document manipulation (DOCX, PDF, PPTX, XLSX), Brand Guidelines, Internal Communications.
- [anthropics/claude-cookbooks](#): Official notebooks and recipes for building with Claude.
- [remotion-dev/skills](#): Official Remotion skills - Video creation in React with 28 modular rules.
- [vercel-labs/agent-skills](#): Vercel Labs official skills - React Best Practices, Web Design Guidelines.
- [openai/skills](#): OpenAI Codex skills catalog - Agent skills, Skill Creator, Concise Planning.
- [supabase/agent-skills](#): Supabase official skills - Postgres Best Practices.
- [microsoft/skills](#): Official Microsoft skills - Azure cloud services, Bot Framework, Cognitive Services, and enterprise development patterns across .NET, Python, TypeScript, Go, Rust, and Java.
- [MiniMax-AI/cli](#): Official MiniMax CLI - text, image, video, speech, music, vision, and web-search workflows for MiniMax models and APIs.
- [google-gemini/gemini-skills](#): Official Gemini skills - Gemini API, SDK and model interactions.
- [apify/agent-skills](#): Official Apify skills - Web scraping, data extraction and automation.
- [BuyWhere/buywhere-mcp](#): Official BuyWhere MCP server — search and compare products from Singapore, SEA, and US markets via Model Context Protocol.
- [expo/skills](#): Official Expo skills - Expo project workflows and Expo Application Services guidance.
- [huggingface/skills](#): Official Hugging Face skills - Models, Spaces, datasets, inference, and broader Hugging Face ecosystem workflows.
- [longbridge/skills](#): Official Longbridge Securities skills - real-time quotes, charts, fundamentals, portfolio analysis, options, and market workflows for HK, US, A-share, and SG markets.
- [neondatabase/agent-skills](#): Official Neon skills - Serverless Postgres workflows and Neon platform guidance.
- [Skyvern-AI/skyvern](#): Official Skyvern browser automation skill — AI-powered browser control using Vision LLMs and computer vision for navigation, site-filling, forms, and extracting structured data.

and computer vision for navigating sites, filling forms, and extracting structured data.

- [scopeblind/scopeblind-gateway](#): Official Scopeblind MCP governance toolkit - Cedar policy authoring, shadow-to-enforce rollout, and signed-receipt verification guidance for agent tool calls.

Community Contributors

- [multica-ai/andrej-karpathy-skills](#): Source for the `andrej-karpathy` skill - English Karpathy-inspired LLM coding guidelines for simplicity, surgical changes, assumption surfacing, and verifiable success criteria (MIT).
- [adelaidasofia/ai-brain-starter](#): Source for the `ingest-youtube` skill - YouTube transcript ingestion into markdown vaults with yt-dlp metadata, VTT cleanup, and capture-seed stubs (MIT).
- [ZeroPointRepo/youtube-skills](#): Source for the `youtube-full` skill - TranscriptAPI-backed YouTube transcripts, search, channel browsing, playlists, and cloud-safe video research workflows (MIT).
- [ejentum/ejentum-mcp](#): Source for the `ejentum-reasoning-harness` skill - MCP cognitive harness modes for reasoning, code review, anti-deception checks, and memory-drift analysis (MIT).
- [luoyuctl/agenttrace](#): Source for the `agenttrace-session-audit` skill - local AI coding-agent session audits for cost spikes, tool failures, latency gaps, anomalies, health gates, and session diffs (MIT).
- [mturac/recsys-pipeline-architect](#): Source for the `recsys-pipeline-architect` skill - recommendation, ranking, and feed pipeline architecture using Source, Hydrator, Filter, Scorer, Selector, and SideEffect stages (MIT).
- [aomi-labs/skills](#): Source for the `aomi-transact` skill — natural-language driver for the Aomi CLI with account-abstraction-first execution and simulate-then-sign across 25+ DeFi apps (MIT).
- [rich-elicitation](#): Source for the `rich-elicitation` skill - asks clarifying questions in multiple rounds before starting ambiguous tasks.
- [CodeShuX/mockhunter](#): Source for the `mock-hunter` skill - Playwright-based live-page audits that classify visible values as real, mock, LLM-generated, hardcoded, broken, or unknown (MIT).
- [commitshow/production-audit](#): Source for the `production-audit` skill - shipped-app readiness auditing across deployment health, RLS, webhooks, secrets exposure, grants, Stripe idempotency, and mobile UX.
- [MohamedAbdallah-14/unslop](#): Source for the `unslop` skill - deterministic and LLM-assisted cleanup for AI-generated prose across CLI and agent tool workflows.
- [monte-carlo-data/mc-agent-toolkit](#): Monte Carlo data observability skills — table health checks, change impact assessment, monitor creation, push ingestion, and SQL validation notebooks for dbt changes.
- [openclaw/skills](#): Source for the `daily-gift` skill - relationship-aware creative gift generation with editorial judgment, concept selection, and multi-format rendering.
- [umutbozdogan/agent-skills-manager](#): Source for the `manage-skills` skill - cross-tool skill discovery, creation, editing, toggling, copying, moving, and deletion workflows across major agent coding tools.
- [pumanitro/global-chat](#): Source for the Global Chat Agent Discovery skill - cross-protocol discovery of MCP servers and AI agents across multiple registries.
- [bitjaru/styleseed](#): StyleSeed Toss UI and UX skill collection - setup wizard, page and pattern generation, design-token management, accessibility review, UX audits, feedback states, and microcopy guidance for professional mobile-first UI.
- [yikuansun/PhotopeaAPI](#): Source for the `photopea-embedded-editor` skill - Photopea embedding, host-page messaging, file I/O, scripting, and export workflows for web apps (MIT).
- [milkomida77/guardian-agent-prompts](#): Source for the Multi-Agent Task Orchestrator skill - production-tested delegation patterns, anti-duplication, and quality gates for coordinated agent work.
- [Elkidogz/technical-change-skill](#): Source for the Technical Change Tracker skill - structured JSON change records, session handoff, and accessible HTML dashboards for coding continuity.
- [rmyndharis/antigravity-skills](#): For the massive contribution of 300+ Enterprise skills and the catalog generation logic.
- [amartelr/antigravity-workspace-manager](#): Workspace Manager CLI companion to dynamically auto-provision subsets of skills across local development environments.
- [obra/superpowers](#): The original "Superpowers" by Jesse Vincent.
- [guanyang/antigravity-skills](#): Core Antigravity extensions.
- [diet103/claude-code-infrastructure-showcase](#): Infrastructure and Backend/Frontend Guidelines.
- [ChrisWiles/claude-code-showcase](#): React UI patterns and Design Systems.
- [travisn/awesome-claude-skills](#): Loki Mode and Playwright integration.
- [Dimillian/Skills](#): Curated Codex skills focused on Apple platforms, GitHub workflows, refactoring, and performance (MIT).
- [zebberrn/claude-code-guide](#): Comprehensive Security suite & Guide (Source for ~60 new skills).
- [morsechimwai/lemmaly](#): Source for the `lemmaly`, `mathguard`, `invariant-guard`, and `complexity-cuts` skills — algorithm-first discipline layer that forces AI coding agents to state Big-O, name the data structure, prove termination, and pick the right algorithm before writing the loop. Ships a deterministic CI scanner with 59 rules across 11 languages (Apache-2.0).
- [alirezarezvani/claude-skills](#): Senior Engineering and PM toolkit.
- [karanb192/awesome-claude-skills](#): A massive list of verified skills for Claude Code.
- [VoltAgent/awesome-agent-skills](#): Curated collection of 1000+ official and community agent skills from leading development teams (MIT).
- [zircote/claude](#): Archived Claude Code dotfiles/config repo with a Shopify development skill reference.
- [vibeforge1111/vibeship-spawner-skills](#): AI agents, integrations, maker tools, and other production-grade skill packs.
- [coreyhaines31/marketingskills](#): Marketing skills for CRO, copywriting, SEO, paid ads, and growth (23 skills, MIT).
- [iradoweck/antigravity-awesome-skills](#): Source for the GeminiIgnore FinOps skill - `.geminiignore` setup patterns for context-window efficiency and token cost reduction.
- [heyneuron/flowhunt-skill](#): Source for the FlowHunt automation discovery audit skill - workflow intake, tool-by-tool audit, and opportunity prioritization for productivity automation.
- [Intelligent-Internet/II-Commons-Skills](#): Source for the II-Commons research skill - deterministic retrieval across arXiv, PubMed/PMC, and supported US policy corpora.
- [AgriciDaniel/claude-seo](#): SEO workflow collection covering technical SEO, hreflang, sitemap, geo, schema, and programmatic SEO patterns.
- [Leonxlnx/taste-skill](#): Frontend design taste skill collection covering premium UI generation, redesign audits, GSAP

motion, Stitch design systems, minimalist and brutalist visual modes, and full-output enforcement.

- [mrprewsh/seo-aeo-engine](#): SEO/AEO content-growth system covering keyword research, content clustering, landing pages, blog structure, schema, internal linking, and audit workflows.
- [jonathimer/devmarketing-skills](#): Developer marketing skills — HN strategy, technical tutorials, docs-as-marketing, Reddit engagement, developer onboarding, and more (33 skills, MIT).
- [kepano/obsidian-skills](#): Obsidian-focused skills for markdown, Bases, JSON Canvas, CLI workflows, and content cleanup.
- [lewiswigmore/agent-skills](#): Source for the `vscode-extension-guide-en` skill - VS Code extension development workflows, packaging, Marketplace publishing, TreeView, and webview patterns.
- [Silverov/yandex-direct-skill](#): Yandex Direct (API v5) advertising audit skill — 55 automated checks, A-F scoring, campaign/ad/keyword analysis for the Russian PPC market (MIT).
- [vudovn/antigravity-kit](#): AI Agent templates with Skills, Agents, and Workflows (33 skills, MIT).
- [affaan-m/everything-claude-code](#): Large Claude Code configuration and workflow collection from an Anthropic hackathon winner (MIT).
- [whatiskadudoing/fp-ts-skills](#): Practical fp-ts skills for TypeScript — fp-ts-pragmatic, fp-ts-react, fp-ts-errors (v4.4.0).
- [warmskull/idea-darwin](#): Darwinian idea-evolution workflow for structured ideation rounds, mutation, crossbreeding, critique, and lineage tracking.
- [Slashworks-biz/idea-os](#): Source for the `idea-os` skill - five-phase pipeline (triage -> clarify -> research -> PRD -> plan) that turns raw ideas into a build-ready PRD and execution plan.
- [webzler/agentMemory](#): Source for the agent-memory-mcp skill.
- [rafsilva85/credit-optimizer-v5](#): Manus AI credit optimizer skill — intelligent model routing, context compression, and smart testing. Saves 30-75% on credits with zero quality loss. Audited across 53 scenarios.
- [ndesv21/socialclaw](#): Source for the SocialClaw social media publishing skill - campaign scheduling and publishing across major social platforms with a single workspace API key.
- [Wittlesus/cursorsrules-pro](#): Professional `.cursorsrules` configurations for 8 frameworks - Next.js, React, Python, Go, Rust, and more. Works with Cursor, Claude Code, and Windsurf.
- [nedcodes-ok/rule-porter](#): Bidirectional rule converter between Cursor (.mdc), Claude Code (CLAUDE.md), GitHub Copilot, Windsurf, and legacy `.cursorsrules` formats. Zero dependencies.
- [SSOJet/skills](#): Production-ready SSOJet skills and integration guides for popular frameworks and platforms — Node.js, Next.js, React, Java, .NET Core, Go, iOS, Android, and more. Works seamlessly with SSOJet SAML, OIDC, and enterprise SSO flows. Works with Cursor, Antigravity, Claude Code, and Windsurf.
- [MojoAuth/skills](#): Production-ready MojoAuth guides and examples for popular frameworks like Node.js, Next.js, React, Java, .NET Core, Go, iOS, and Android.
- [Xquik-dev/x-twitter-scraper](#): X (Twitter) data platform — tweet search, user lookup, follower extraction, engagement metrics, giveaway draws, monitoring, webhooks, 19 extraction tools, MCP server.
- [connerlambden/helium-mcp](#): Source for the `helium-mcp` skill — MCP server for news intelligence, media bias analysis, market data, options pricing, and semantic meme search.
- [shmlkv/dna-claude-analysis](#): Personal genome analysis toolkit — Python scripts analyzing raw DNA data across 17 categories (health risks, ancestry, pharmacogenomics, nutrition, psychology, etc.) with terminal-style single-page HTML visualization.
- [AlmogBaku/debug-skill](#): Interactive debugger skill for AI agents — breakpoints, stepping, variable inspection, and stack traces via the `dap` CLI. Supports Python, Go, Node.js/TypeScript, Rust, and C/C++.
- [sendblue-api/sendblue-cli](#): Source for the `sendblue-cli`, `sendblue-api`, and `sendblue-notify` skills — iMessage, SMS, and RCS messaging via Sendblue's CLI and HTTP API, plus "text me when X finishes" notification patterns for Claude Code hooks and `/loop` / `/schedule` jobs (MIT).
- [nierschow/textme](#): Source for the `textme` skill — local daemon bridging inbound iMessages (via Sendblue) to a Claude Code session on the user's machine, with voice notes, image input, code execution, and a phone-number whitelist (MIT).
- [aptratcn/skill-audit](#): Pre-install security audit skill for detecting malicious, overprivileged, or suspicious third-party agent skills before installation (MIT).
- [uberSKILLS](#): Design, test, and deploy Claude Code Agent Skills through a visual, AI-assisted workflow.
- [christopherhammer11-ai/tool-use-guardian](#): Source for the Tool Use Guardian skill — tool-call reliability wrapper with retries, recovery, and failure classification.
- [christopherhammer11-ai/recallmax](#): Source for the RecallMax skill — long-context memory, summarization, and conversation compression for agents.
- [tsilverberg/webapp-uat](#): Full browser UAT skill — Playwright testing with console/network error capture, WCAG 2.2 AA accessibility checks, i18n validation, responsive testing, and P0-P3 bug triage. Read-only by default, works with React, Vue, Angular, Ionic, Next.js.
- [Wolfe-Jam/faf-skills](#): AI-context and project DNA skills — .faf format management, AI-readiness scoring, bi-sync, MCP server building, and championship-grade testing (17 skills, MIT).
- [fullstackcrew-alpha/privacy-mask](#): Local image privacy masking for AI coding agents. Detects and redacts PII, API keys, and secrets in screenshots via OCR + 47 regex rules. Claude Code hook integration for automatic masking. Supports Tesseract and RapidOCR. 100% offline (MIT).
- [AvdLee/SwiftUI-Agent-Skill](#): SwiftUI best-practices skill for agent workflows (MIT).
- [CloudAI-X/threejs-skills](#): Three.js-focused skill collection for agent-assisted 3D web work.
- [K-Dense-AI/claude-scientific-skills](#): Scientific, research, engineering, finance, and writing skill suite (MIT).
- [NotMyself/claude-win11-speckit-update-skill](#): Archived Speckit update skill for Claude Code (MIT).
- [SHADOWPRO/beautiful_prose](#): Writing-quality skill for improving prose and reducing generic output.
- [SHADOWPRO/security-bluebook-builder](#): Security documentation/buildbook skill for agent workflows.
- [SeanZoR/claude-speed-reader](#): RSVP-style speed-reading helper for Claude responses (MIT).
- [Shpigford/skills](#): General-purpose agent skills for common development tasks (MIT).
- [ZhangHanDong/makepad-skills](#): Makepad app-development skills and references (MIT).
- [czlonkowski/n8n-skills](#): n8n workflow-building skills for Claude Code (MIT).
- [frmoretto/clarity-gate](#): Verification protocol for marking uncertainty and reducing hallucinated certainty in LLM-facing docs.
- [fruitwyatt/puzzle-activity-planner](#): Puzzle activity-planning skill for classrooms, parties, and events with generator-link workflows.

- [gokapso/agent-skills](#): Kapso/WhatsApp-oriented agent skills.
- [huifer/WellAlly-health](#): Healthcare assistant project cited in release history as a source for health-focused agent capabilities (MIT).
- [hyhmrright/brooks-lint](#): AI code-review skill grounded in classic software engineering books for design-smell, coupling, and architecture review.
- [hyhmrright/logic-lens](#): AI code-review skill for formal logic inspection across bugs, race conditions, security risks, and API contract issues.
- [ibelick/ui-skills](#): UI-polish skills for improving interfaces built by agents (MIT).
- [jackjin1997/ClawForge](#): Resource hub of skills, MCP servers, and agent tooling for OpenClaw.
- [jthack/ffuf_claude_skill](#): FFUF skill for web fuzzing workflows in Claude.
- [kubestellar/console](#): KubeStellar Console multi-cluster Kubernetes dashboard with `kc-agent` MCP integration, AI-assisted operations, and built-in agent skills.
- [MetcalfSolutions/Satori](#): Clinically informed wisdom companion blending psychology frameworks and wisdom traditions into a structured reflective partner.
- [muratcankoylan/Agent-Skills-for-Context-Engineering](#): Context-engineering, multi-agent, and production agent-system skill collection (MIT).
- [robzolkos/skill-rails-upgrade](#): Rails upgrade skill for agent-assisted migrations.
- [sanjay3290/ai-skills](#): Apache-licensed collection of agent skills for AI coding assistants.
- [scarletkc/vexor](#): Semantic search engine for files and code, referenced in release history.
- [sstklen/infinite-gratitude](#): Multi-agent research skill from the AI Dojo series (MIT).
- [wsmith108/linear-claude-skill](#): Linear issue/project/team management skill with MCP and GraphQL workflows (MIT).
- [wsmith108/varlock-claude-skill](#): Secure environment-variable management skill for Claude Code (MIT).
- [zarazhangrui/frontend-slides](#): Frontend slide-creation skills for web-based presentations (MIT).
- [zxkane/aws-skills](#): AWS-focused Claude agent skills (MIT).
- [UrRhb/agentflow](#): Kanban-driven AI development pipeline for orchestrating multi-worker Claude Code workflows with deterministic quality gates, adversarial review, cost tracking, and crash-proof execution (MIT).
- [AgentPhone-AI/skills](#): AgentPhone plugin for Claude Code — API-first telephony workflows for AI agents, including phone calls, SMS, phone-number management, voice-agent setup, streaming webhooks, and tool-calling patterns.
- [uxuiprinciples/agent-skills](#): Research-backed UX/UI agent skills for auditing interfaces against 168 principles, detecting antipatterns, and injecting UX context into AI coding sessions.
- [voidborne-d/humanize-chinese](#): Chinese AI-text detection and humanization toolkit for scoring, rewriting, academic AIGC reduction, and style conversion workflows.
- [voidborne-d/lambda-lang](#): Agent-to-agent coordination language with compact atoms for multi-agent messaging, orchestration, and structured coordination logs.
- [LambdaTest/agent-skills](#): Production-grade agent skills for test automation — 46 skills covering E2E, unit, mobile, BDD, visual, and cloud testing across 15+ languages (MIT).
- [flyingsquirrel0419/squirrel-skill](#): Full-cycle software development skill — plans, builds, tests, lints, fixes bugs, and writes production-grade docs. Auto-detects project state and adapts its 8-phase pipeline. Works on 9 AI coding agent platforms (Apache 2.0).
- [CodeShuX/tokenwise](#): Source for the `tokenwise` skill — measurement-driven Haiku/Sonnet/Opus router for Claude Code with per-task NDJSON logging, A/B test mode, and verified \$-saved reports (MIT).

Inspirations

- [f/awesome-chatgpt-prompts](#): Inspiration for the Prompt Library.
- [leonardomso/33-js-concepts](#): Inspiration for JavaScript Mastery.

Additional Sources

- [agent-cards/skill](#): Manage prepaid virtual Visa cards for AI agents. Create cards, check balances, view credentials, close cards, and get support via MCP tools.

Repo Contributors

Made with [contrib.rocks](#). (Image may be cached; [view live contributors](#) on GitHub.)

We officially thank the following contributors for their help in making this repository awesome!
