Strategy Overview

- 01 – **What is an FVG ?**
- 02 – **Good & Bad FVGs**
- 03 – **1H–4H FVG into 15–min FVG**
- 04 – **Displacement**
- 05 – **Entry Model**
- 06 – **Real Data Behind FVGs**
- 07 – **Same FVGs, Different Odds**
- 08 – **Example Trade 1**
- 08 – **Example Trade 2**
- 08 – **Example Trade 3**

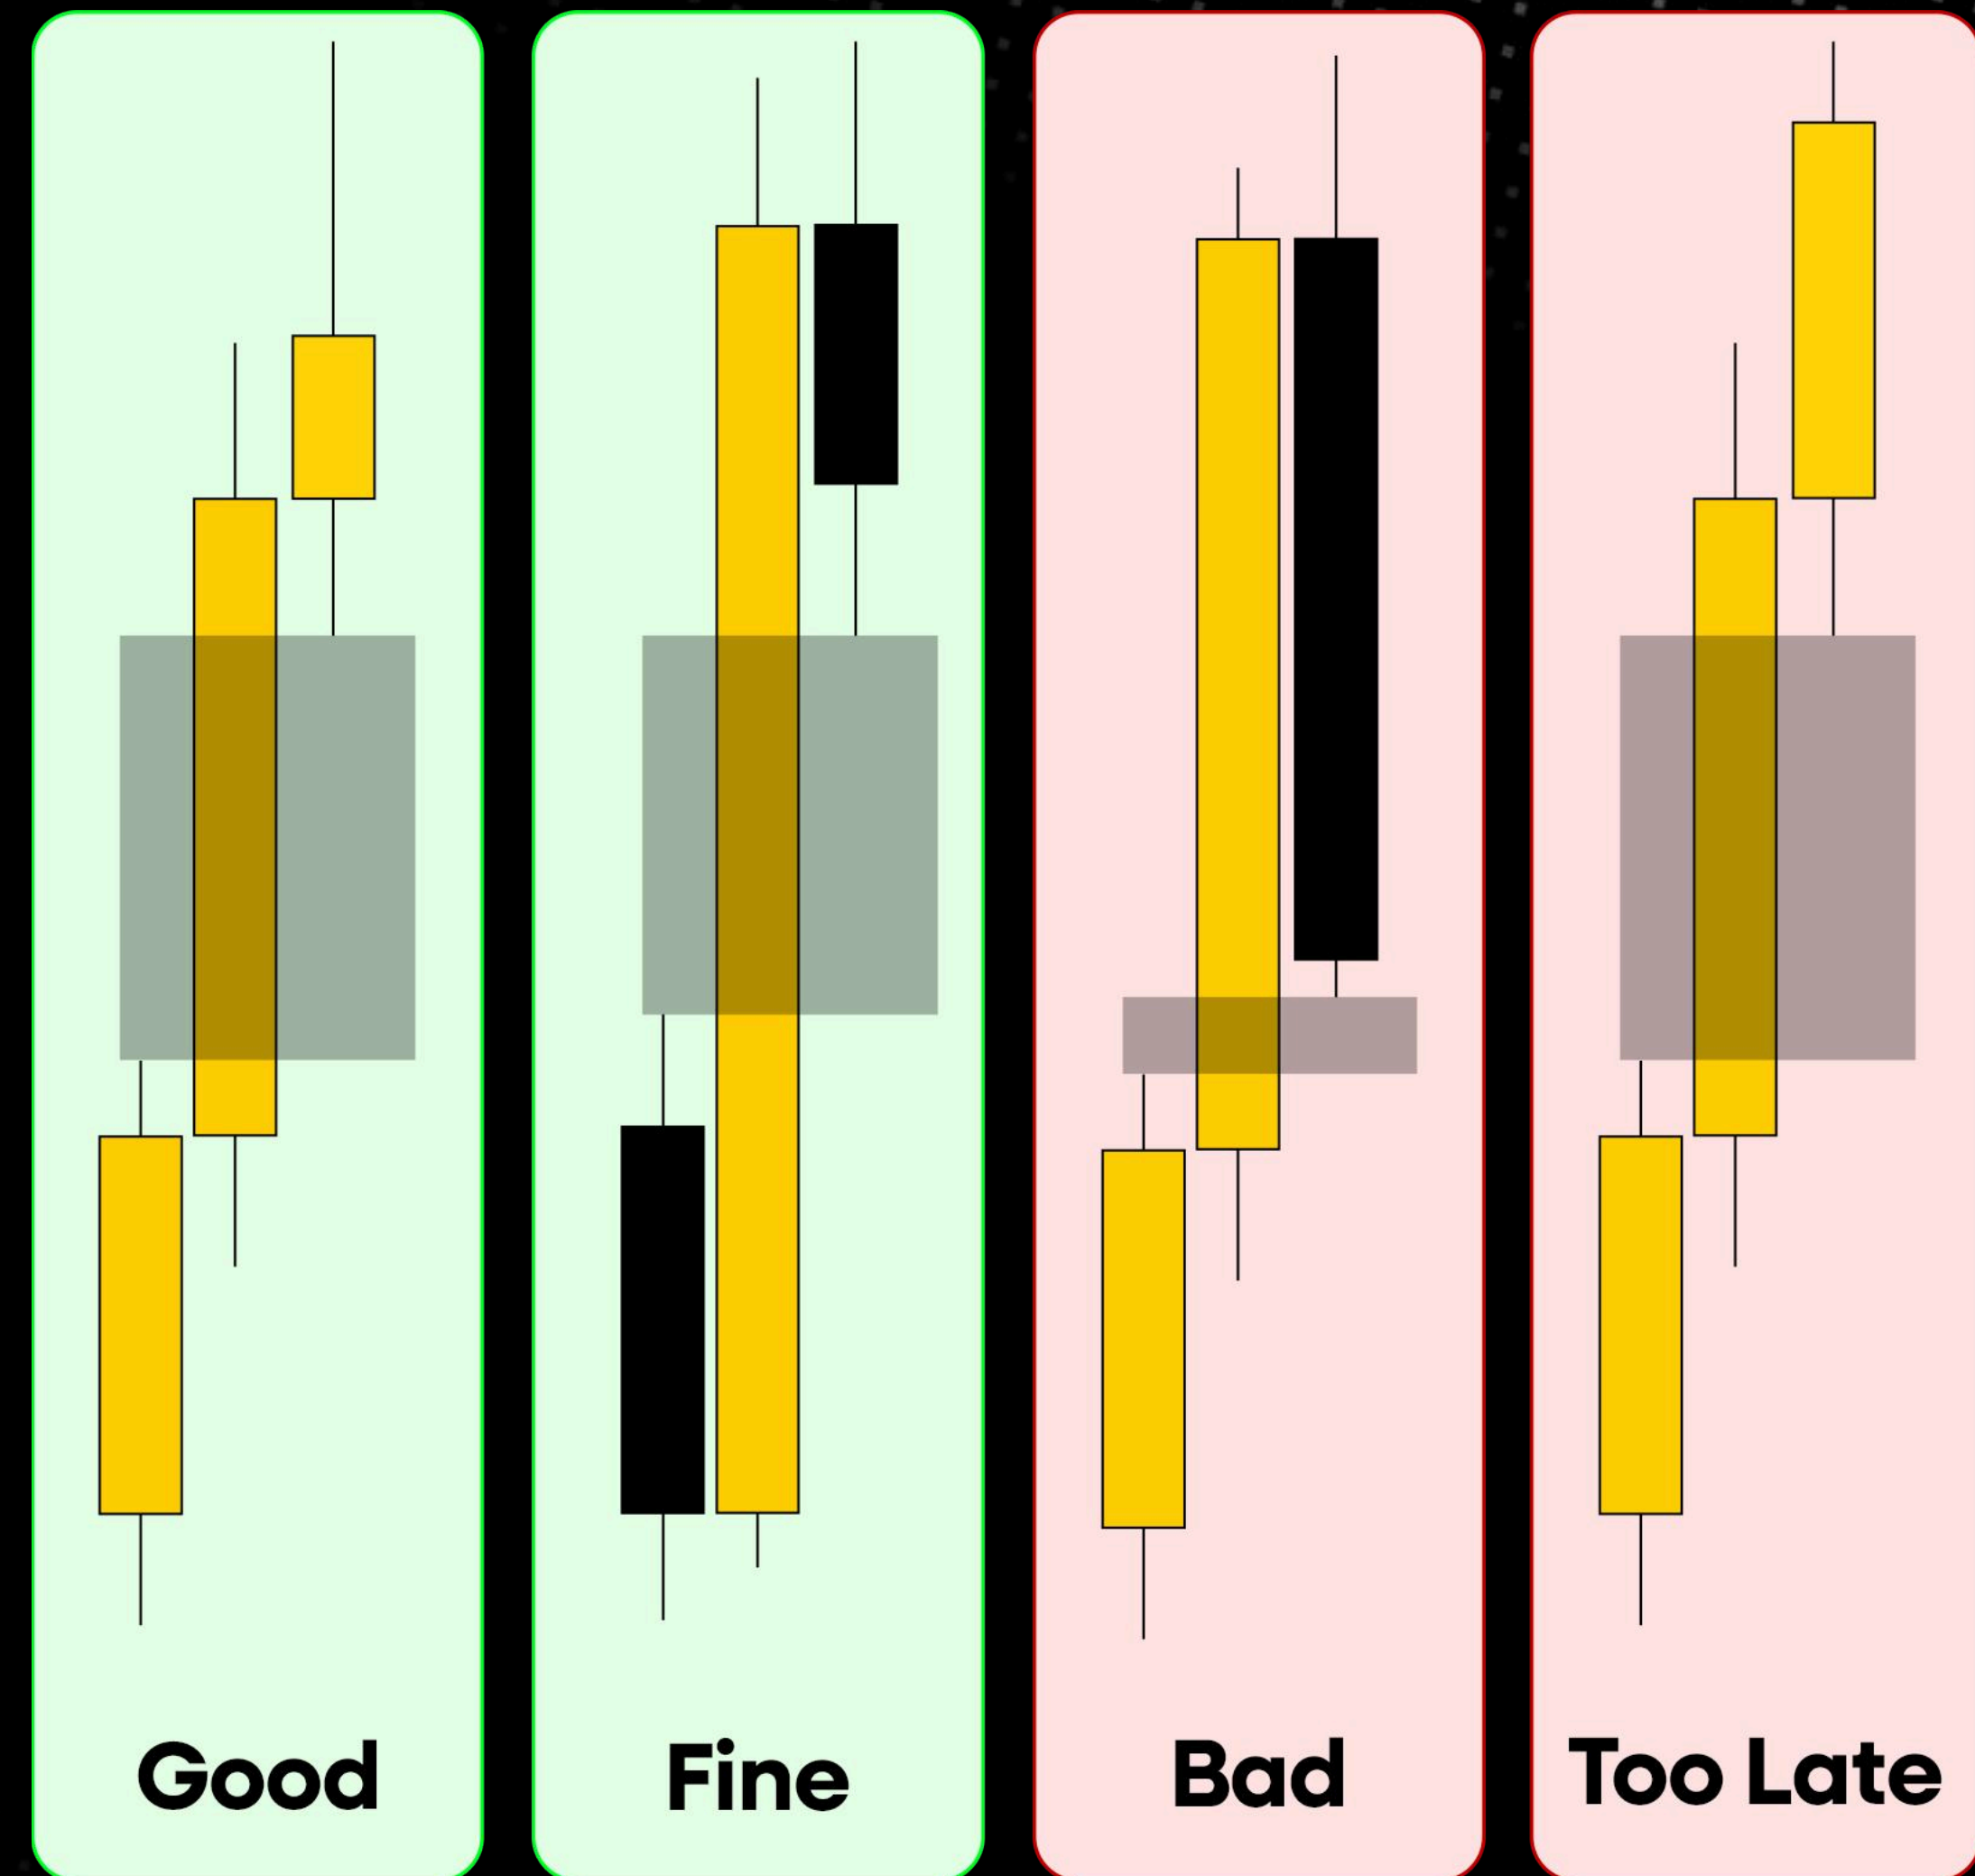

What is an FVG?

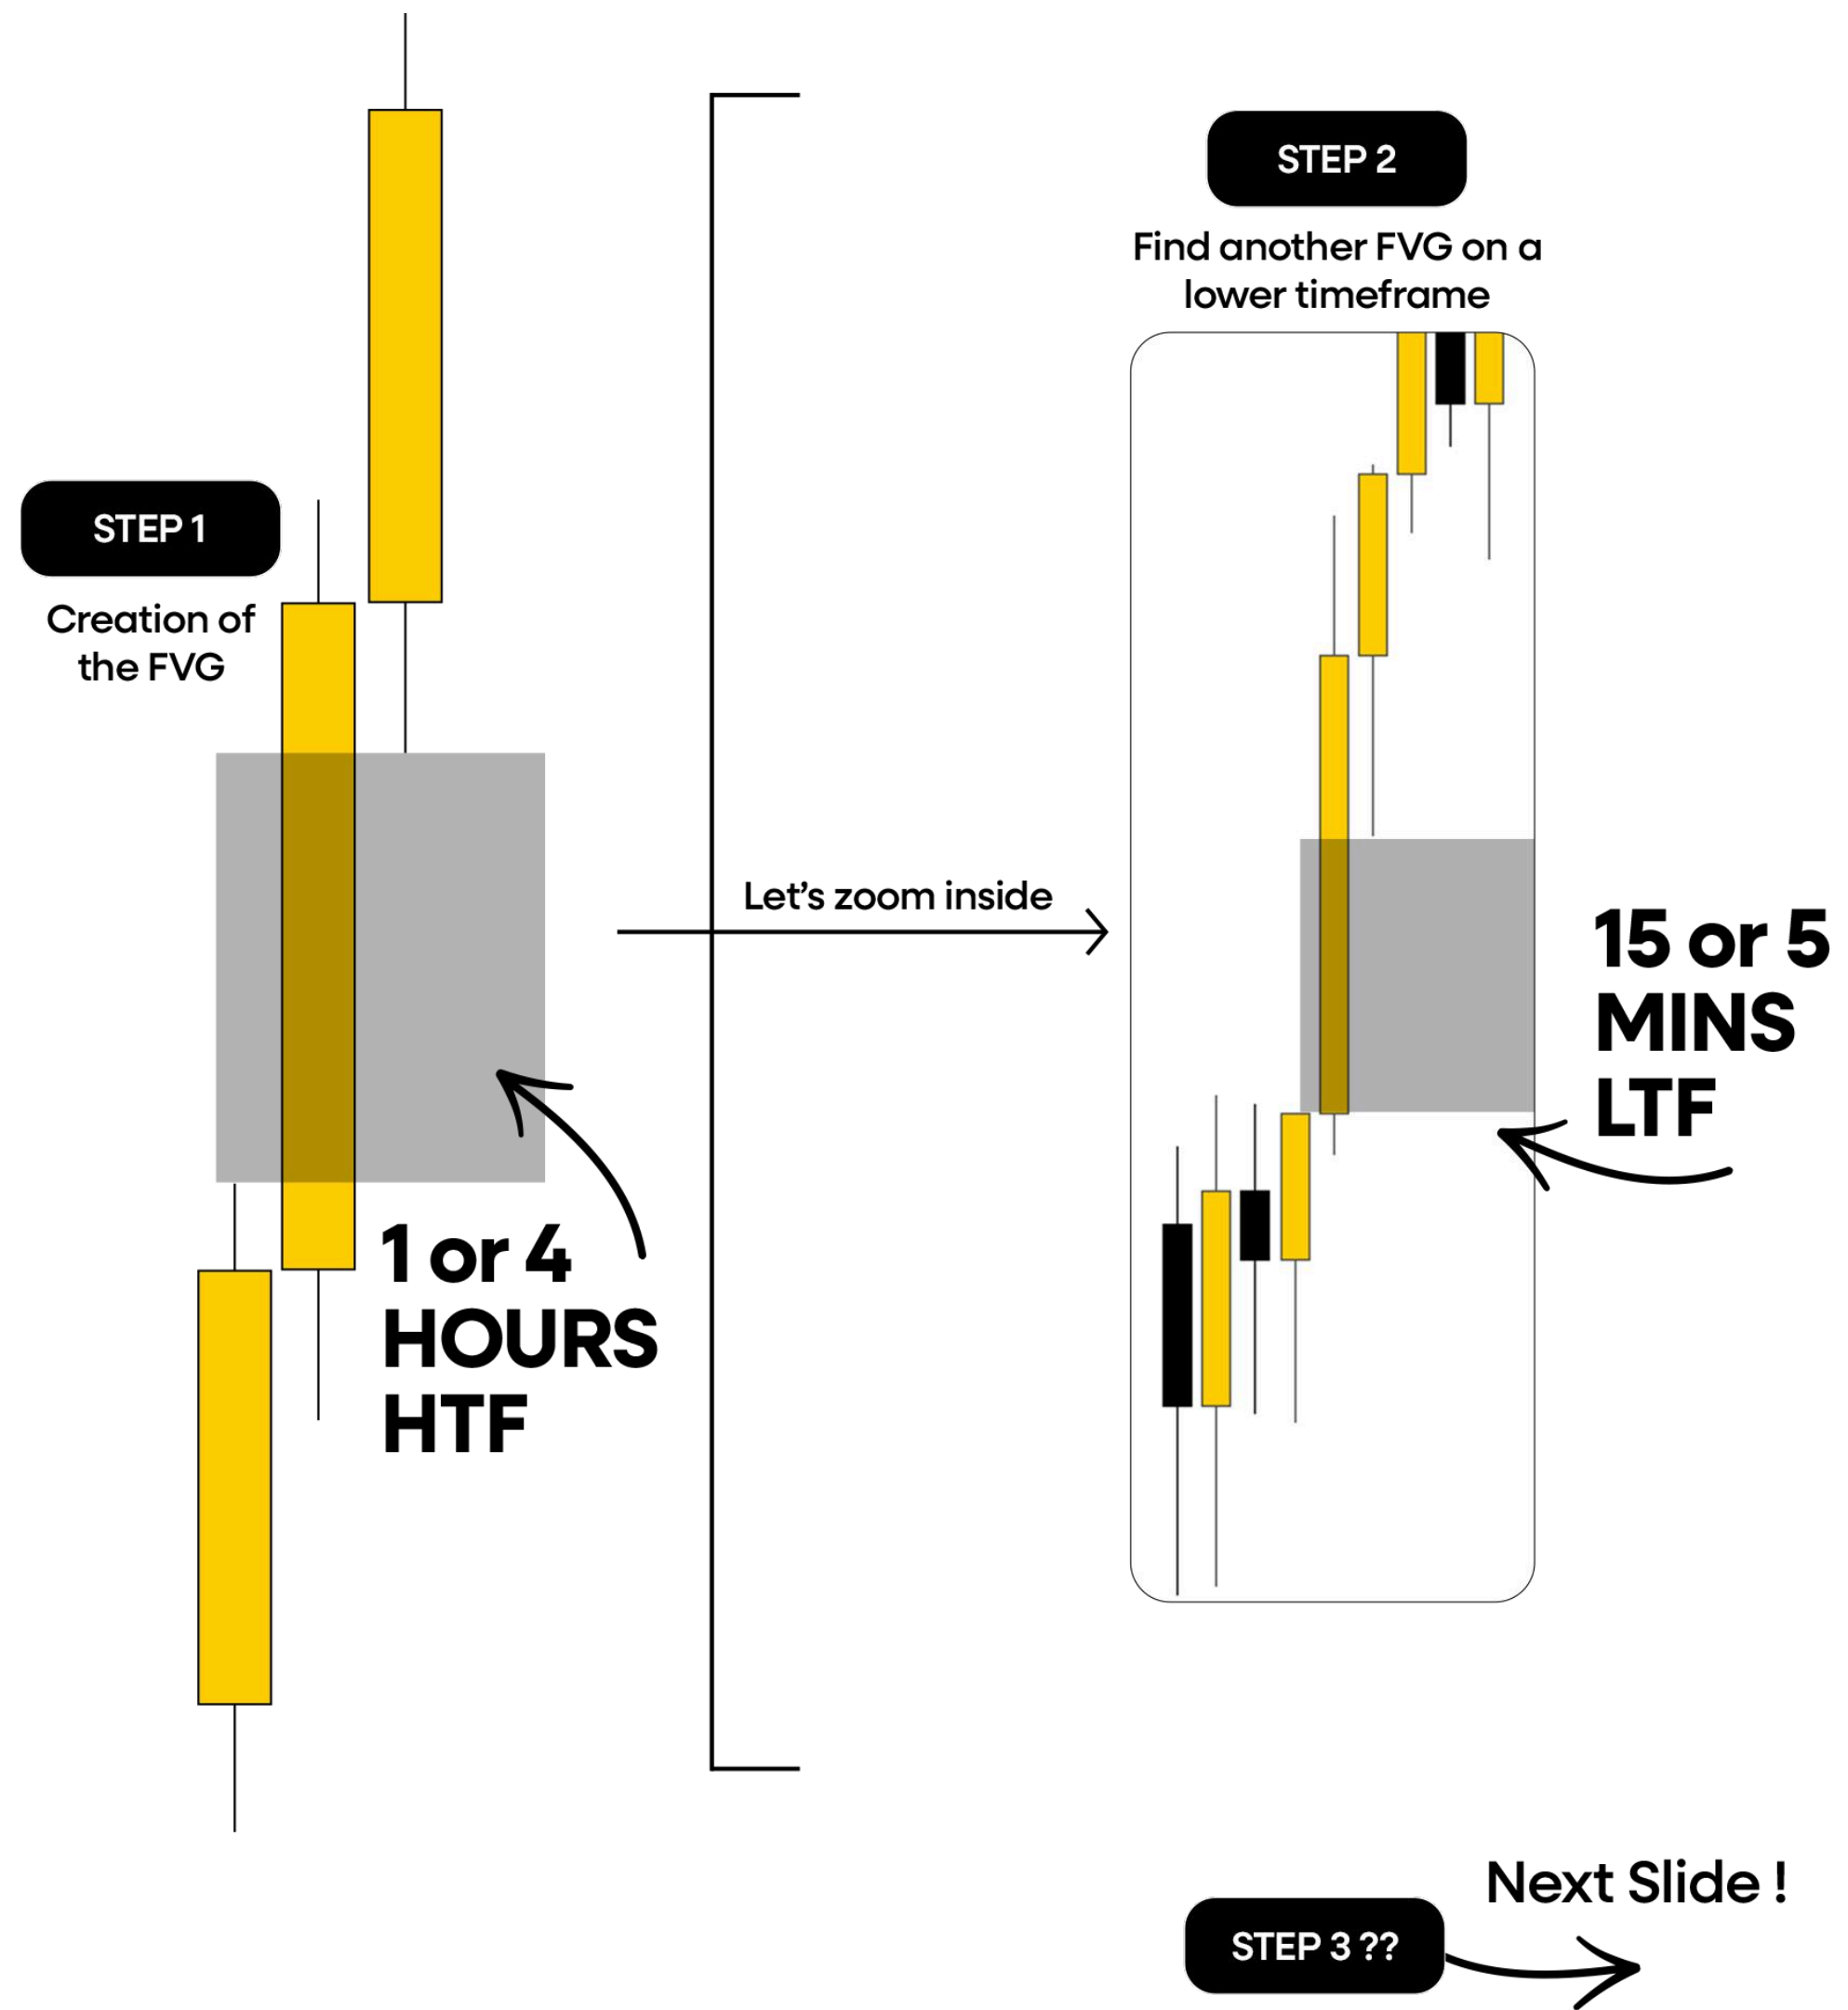

A Fair Value Gap is an imbalance created by a strong price move where little trading occurred, often attracting price back to rebalance that area.

Most traders don't understand this about FVGs

Not all FVGs are created equal. Read until the end and you'll see exactly why...

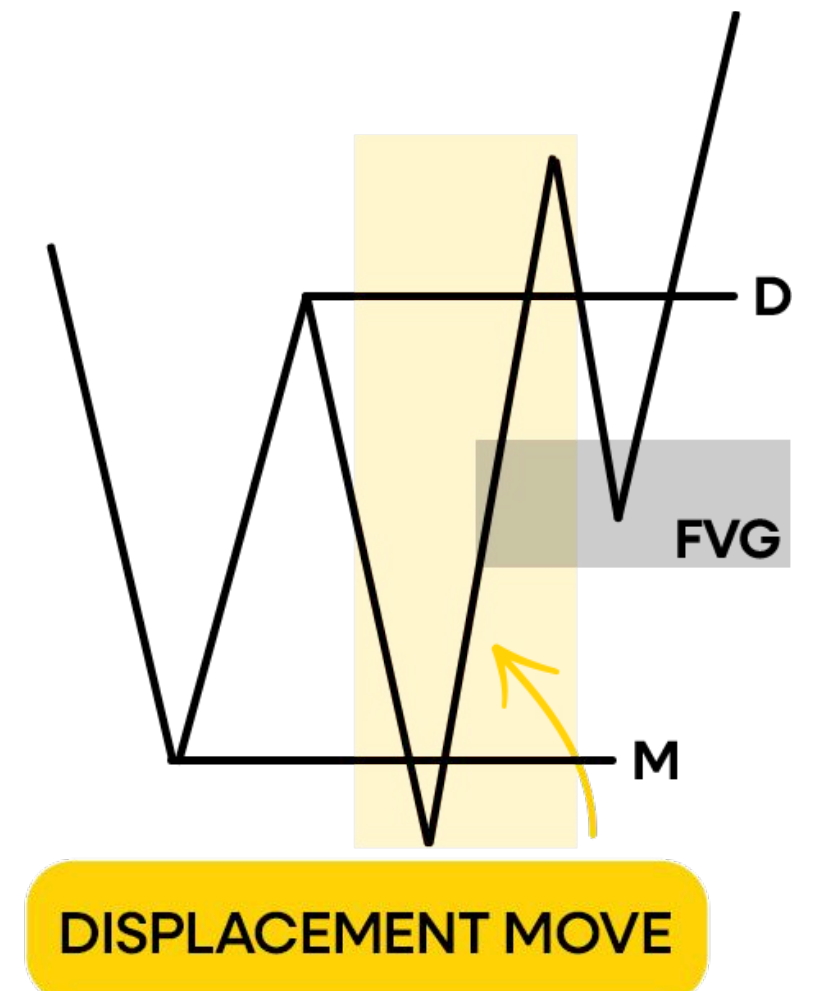

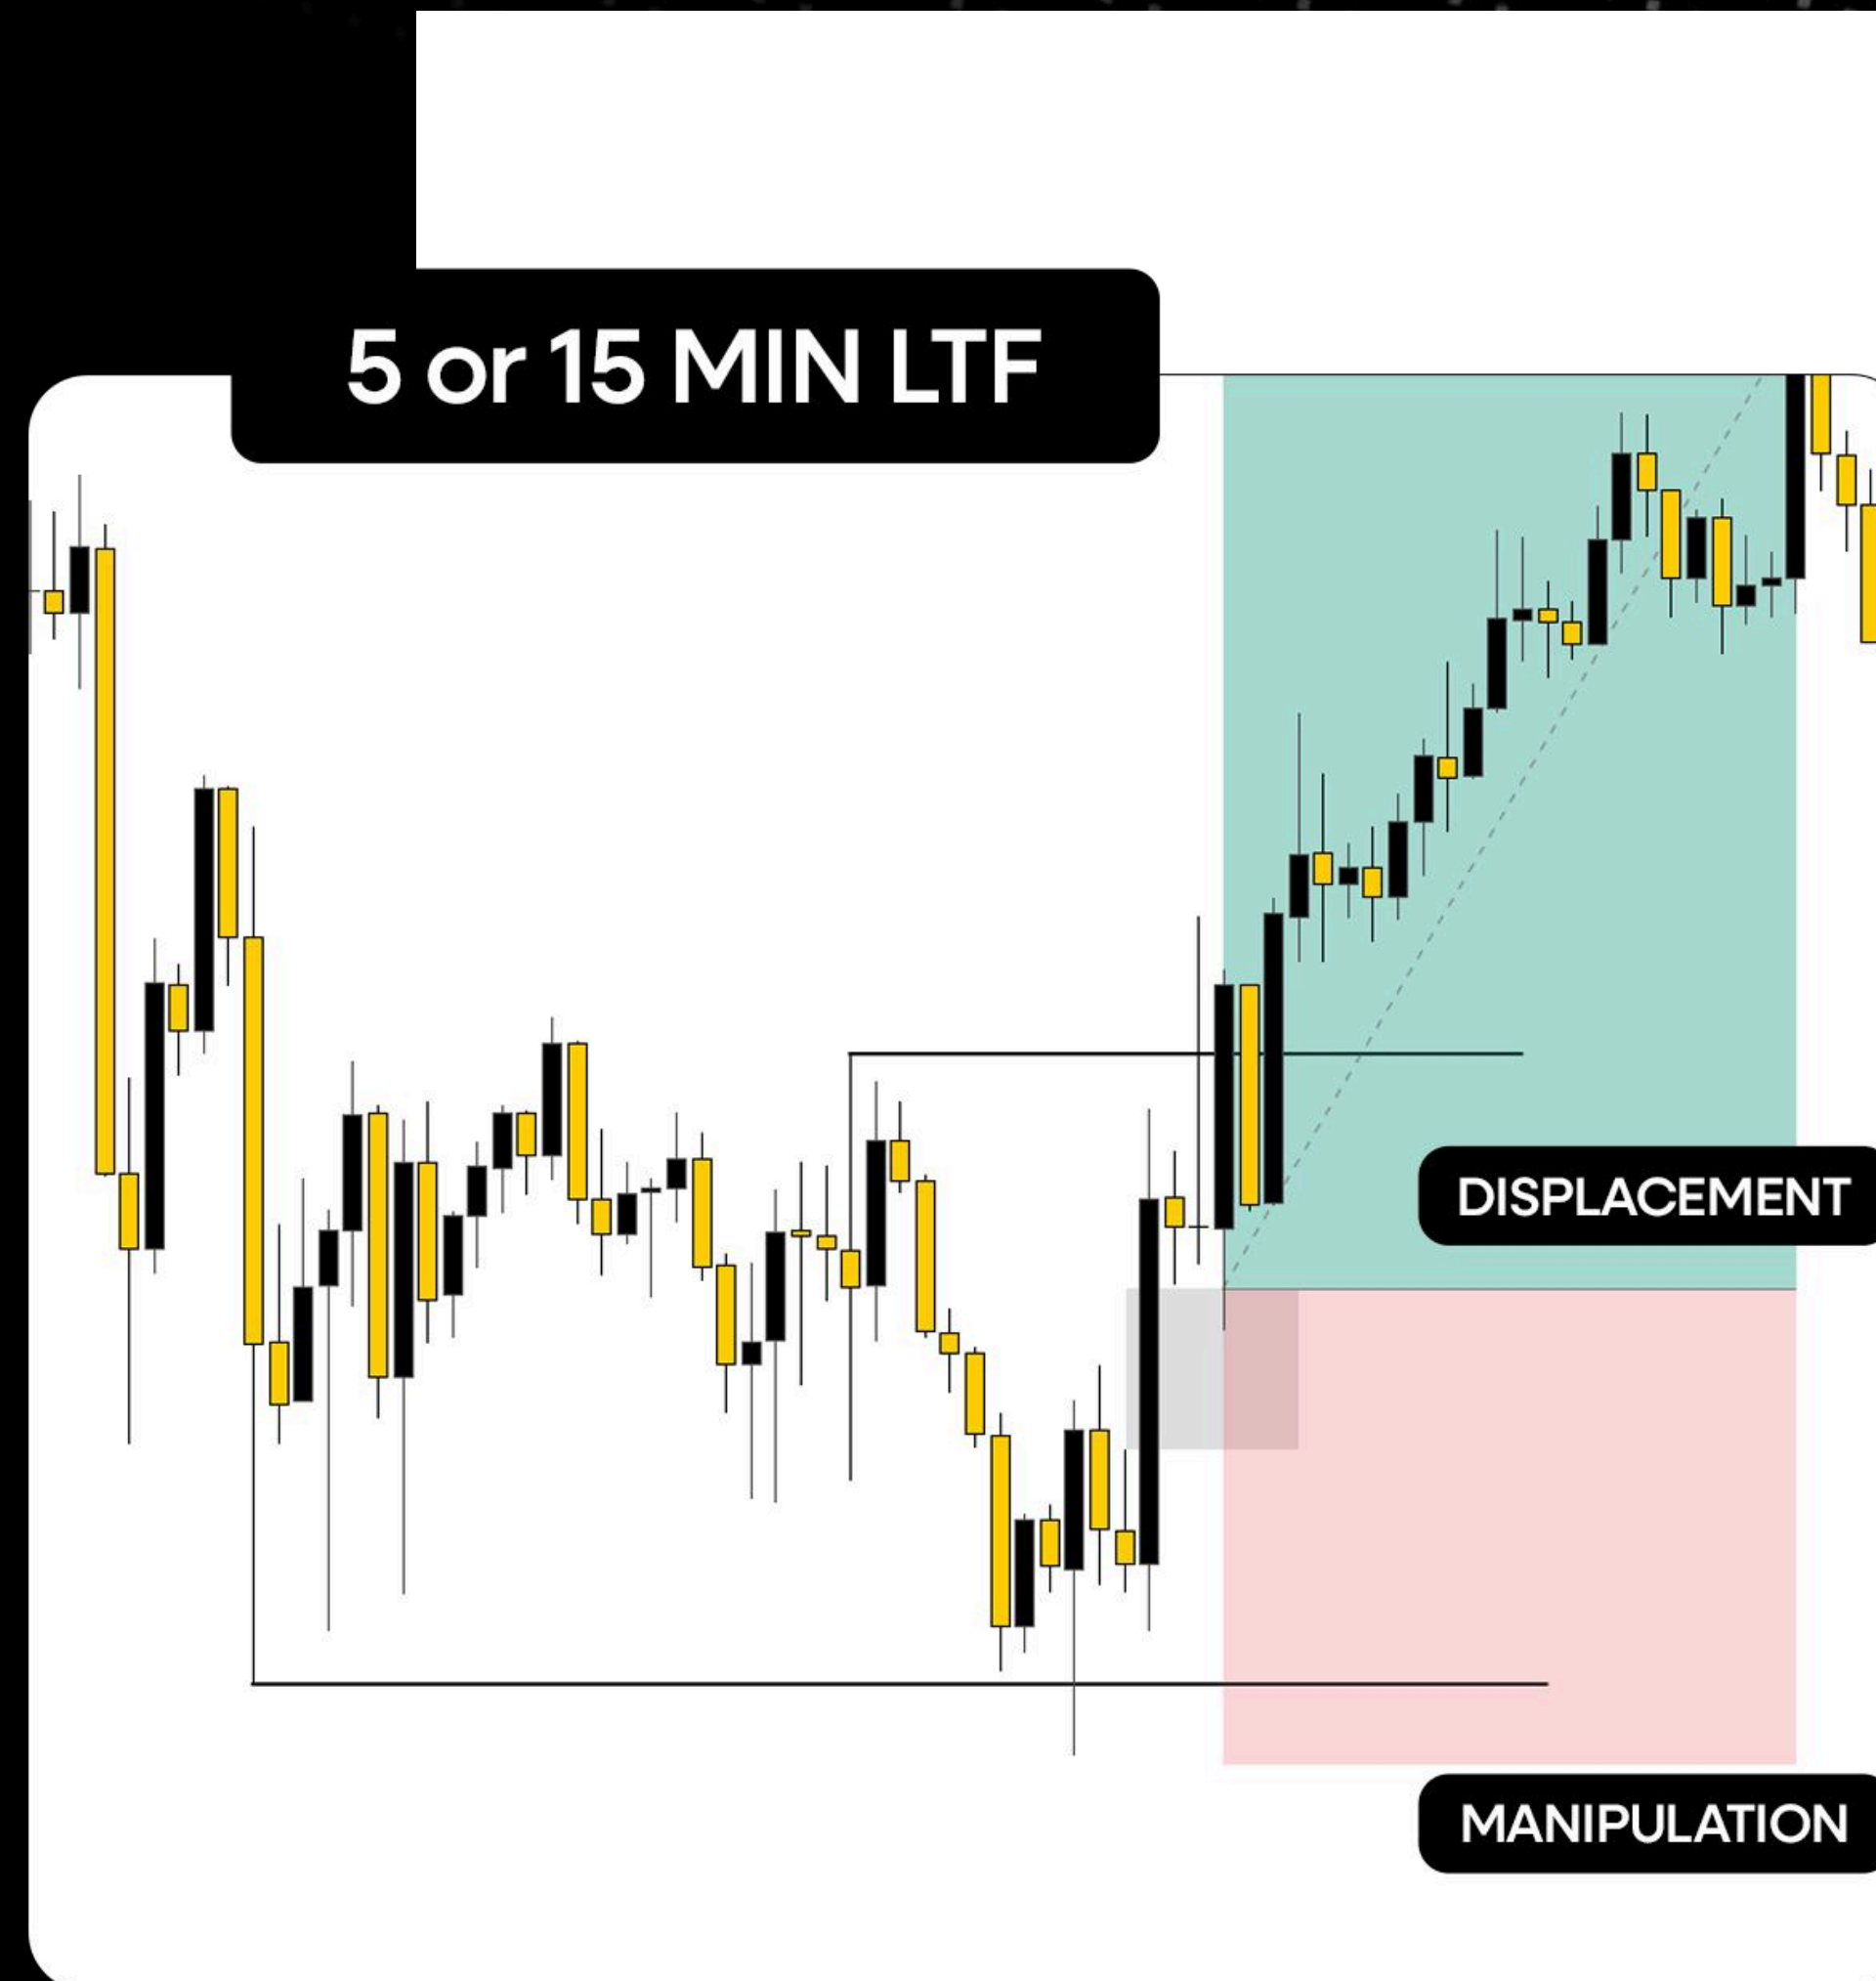

Step 3 : Displacement

Displacement = Continuation

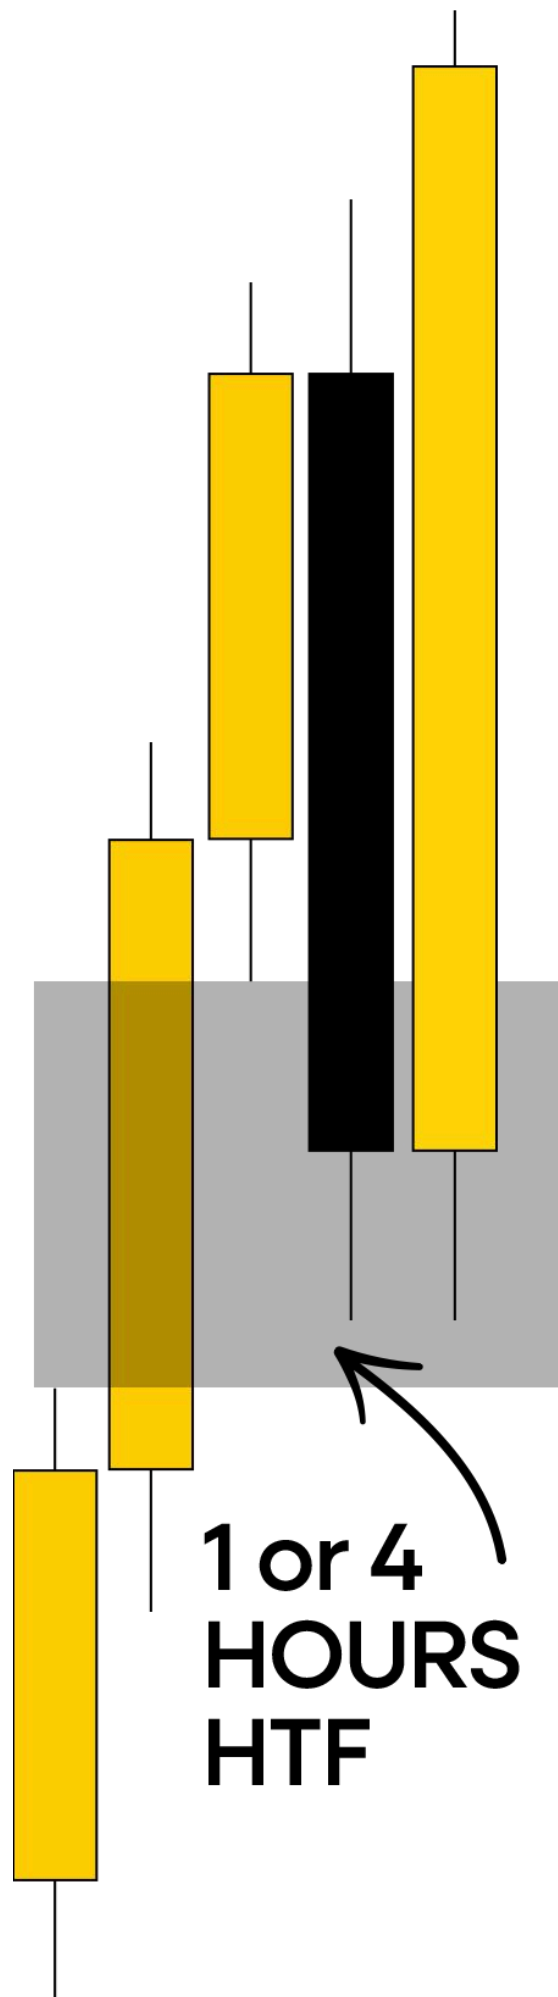

Manipulation = Reversal Displacement is confirmed by FVGs How price reacts to highs and lows tells you everything

Important: Manipulation should occur after sweeping a key level.

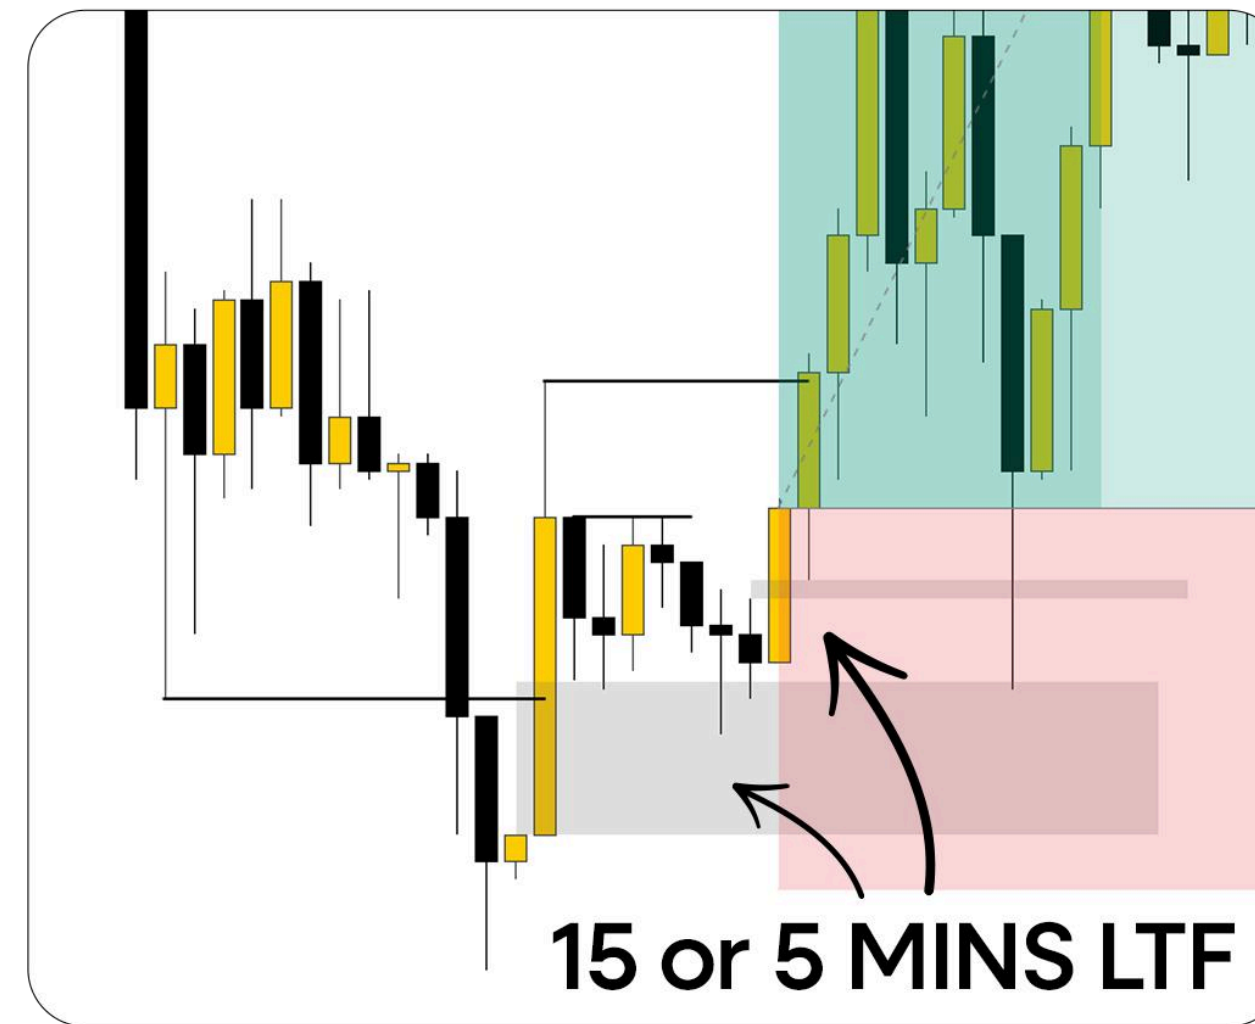

STEP 1

Creation of
the FVG

STEP 2

Find Displacement
& Create a New FVG

STEP 3

Bonus entry model:

Wait for a reaction when the candlestick
taps into the FVG

OR

Wait for a reaction followed by a
bearish or bullish engulfing candle

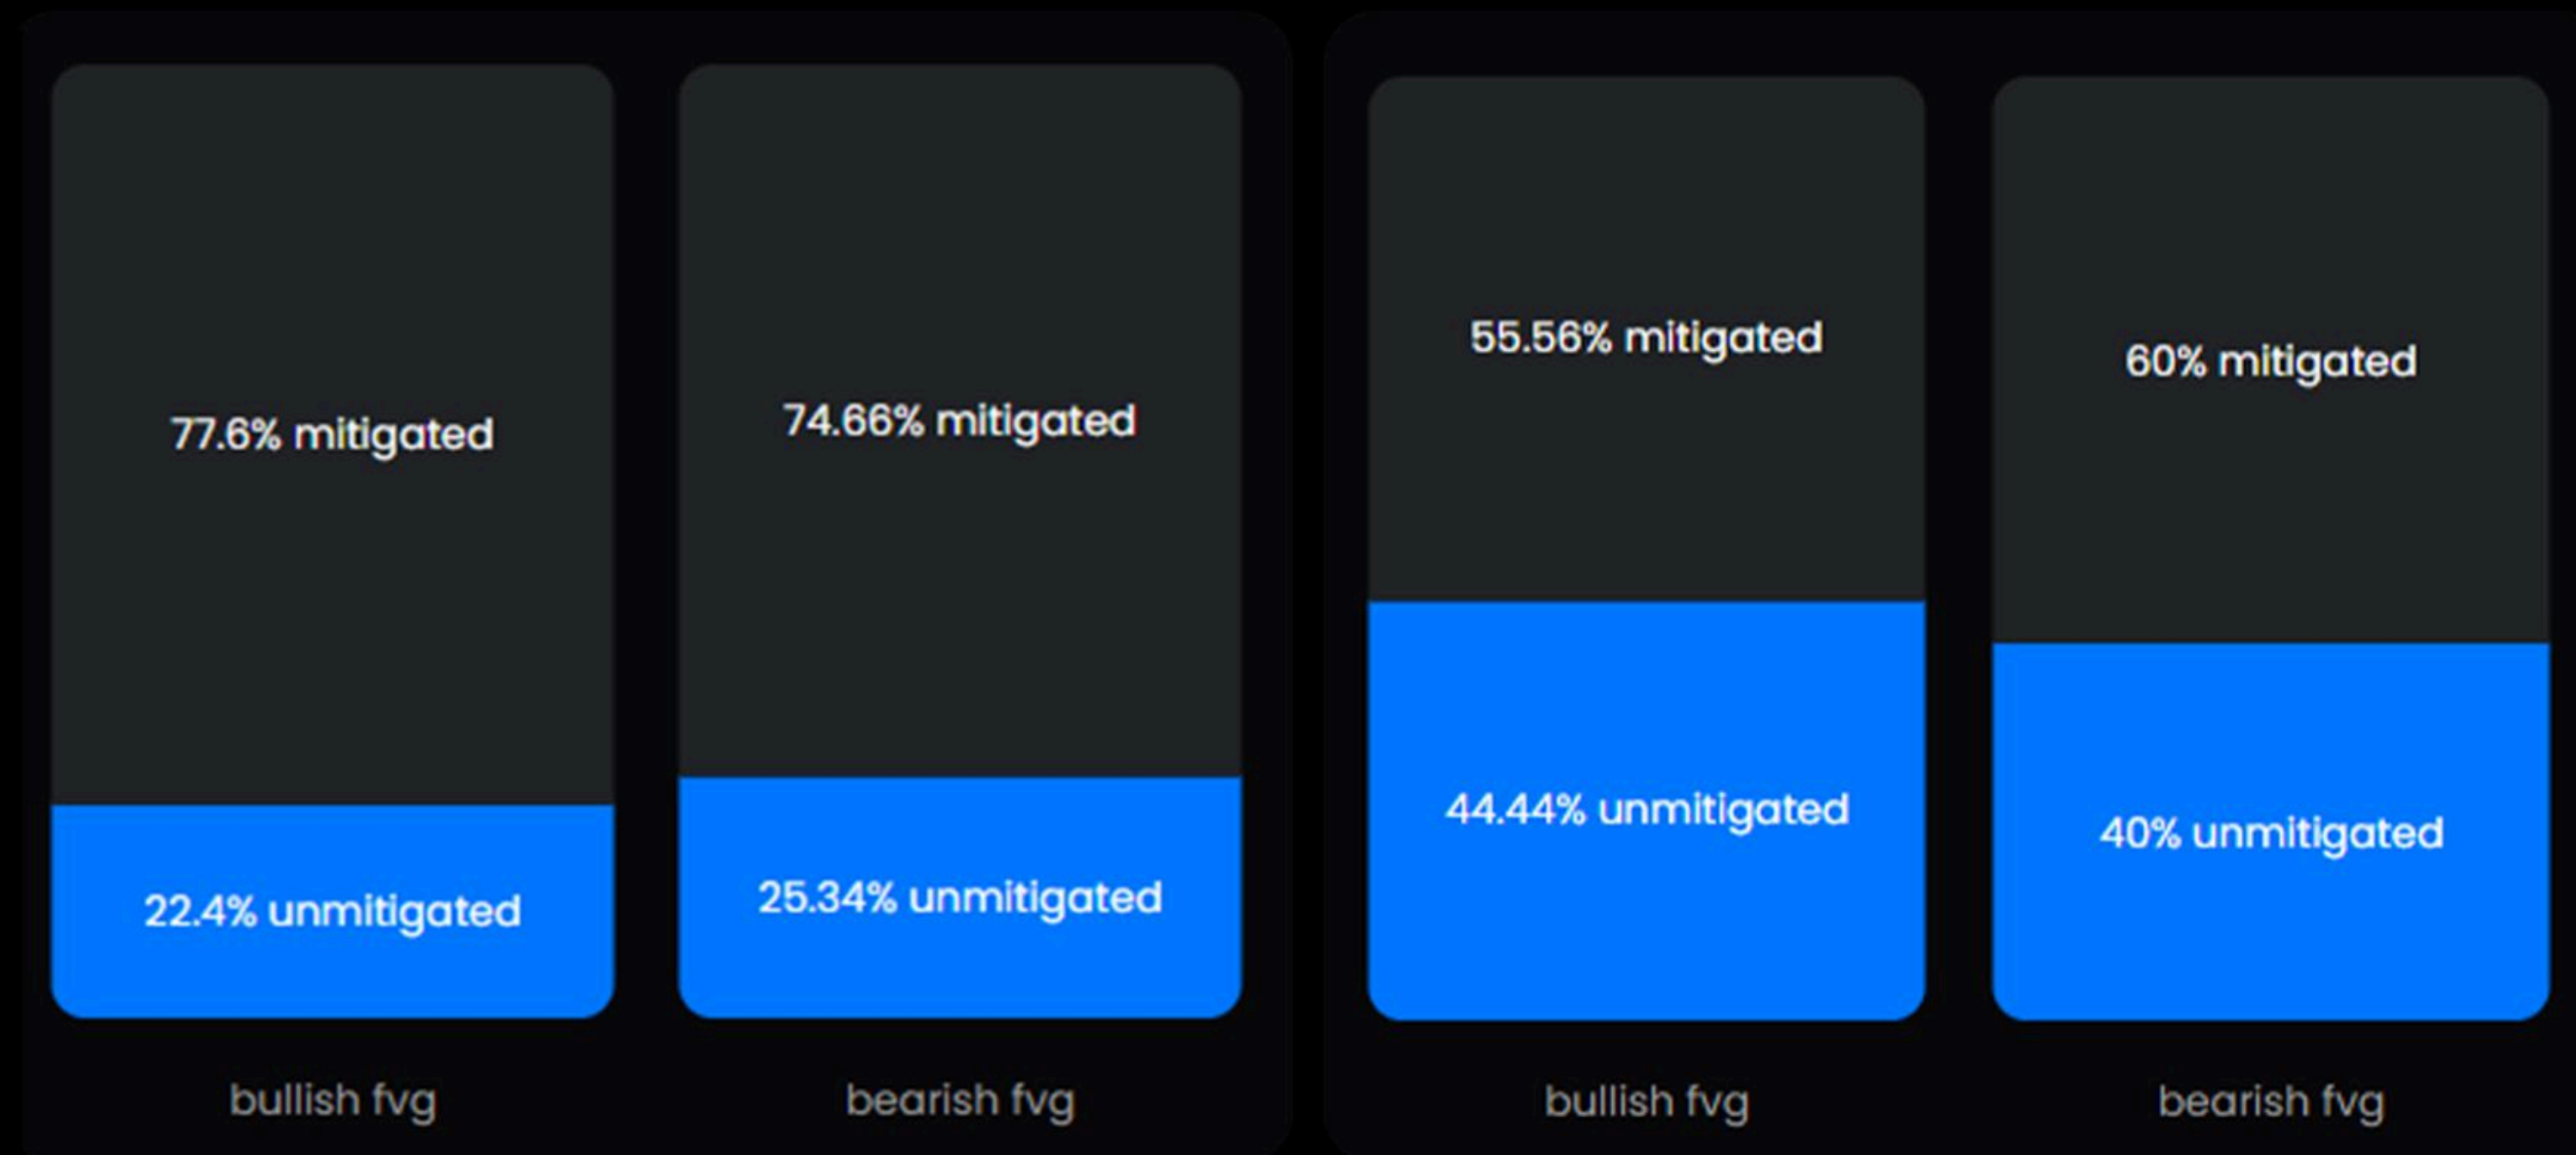

HOW TO USE REAL DATA TO FIND BETTER FVGs?

NOT ALL FVGs BEHAVE THE SAME.

Using historical data from Edgeful, we can see how often FVGs are actually mitigated.

Data based on NQ/ES/YM (ONLY) from 07/27/26 - 08/25/26

5 MIN FVGs ≈ 75% mitigated

30 MIN FVGs ≈ 58% mitigated

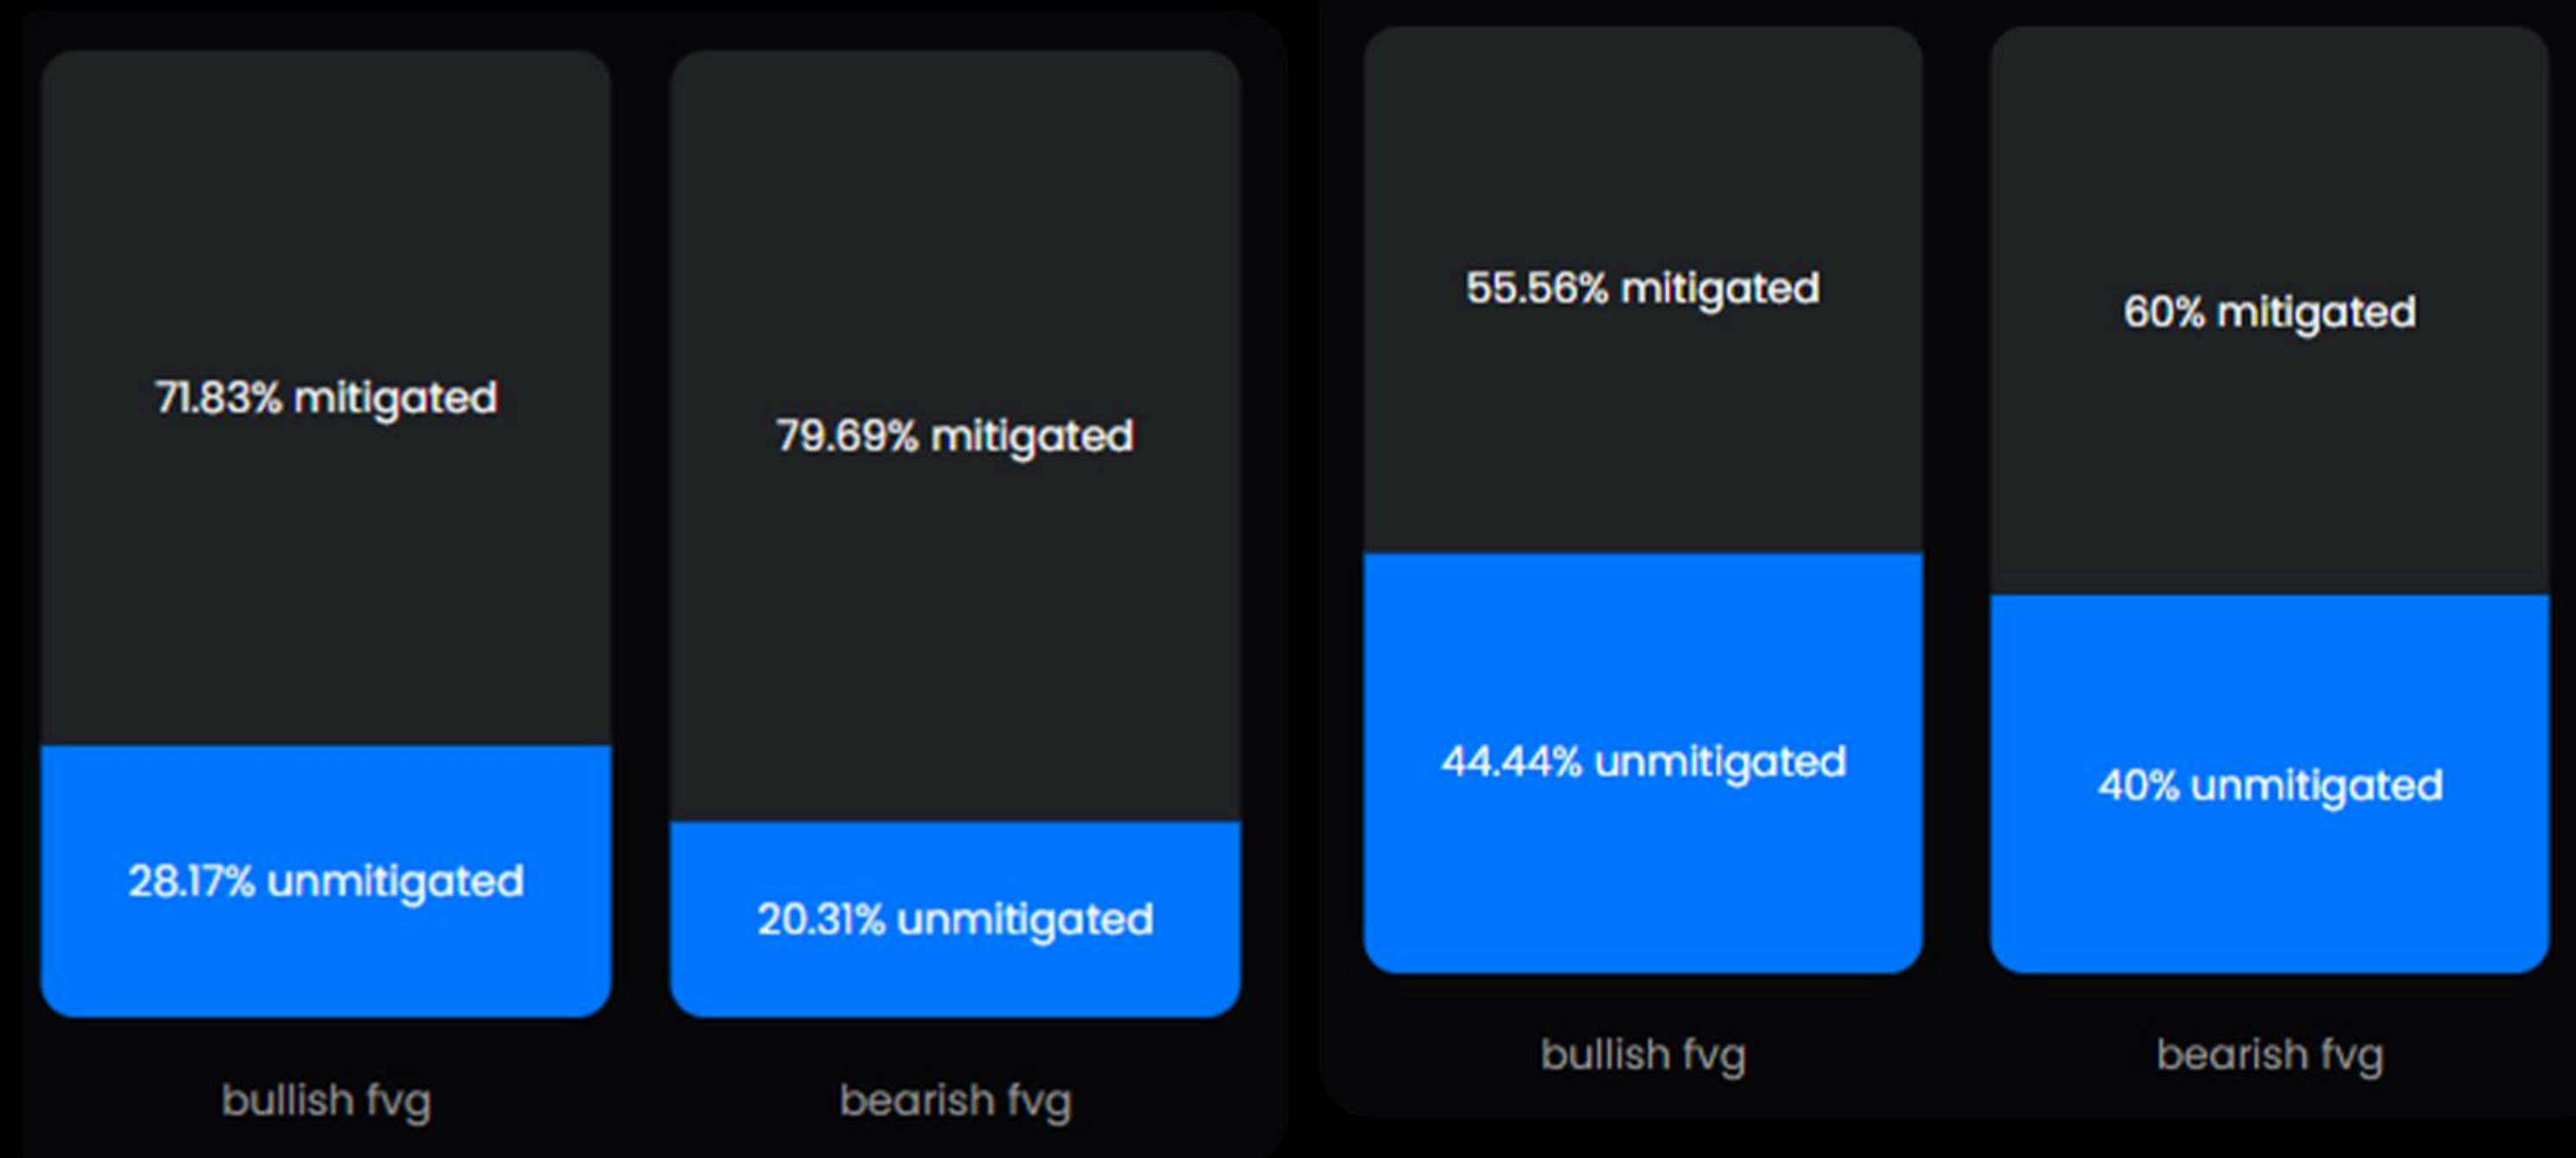

Lower-timeframe FVGs were revisited more often in this sample.

Use data. Don't assume.

SAME PAIR. DIFFERENT ODDS.

Data based on EURUSD (ONLY) from 07/27/26 - 08/25/26

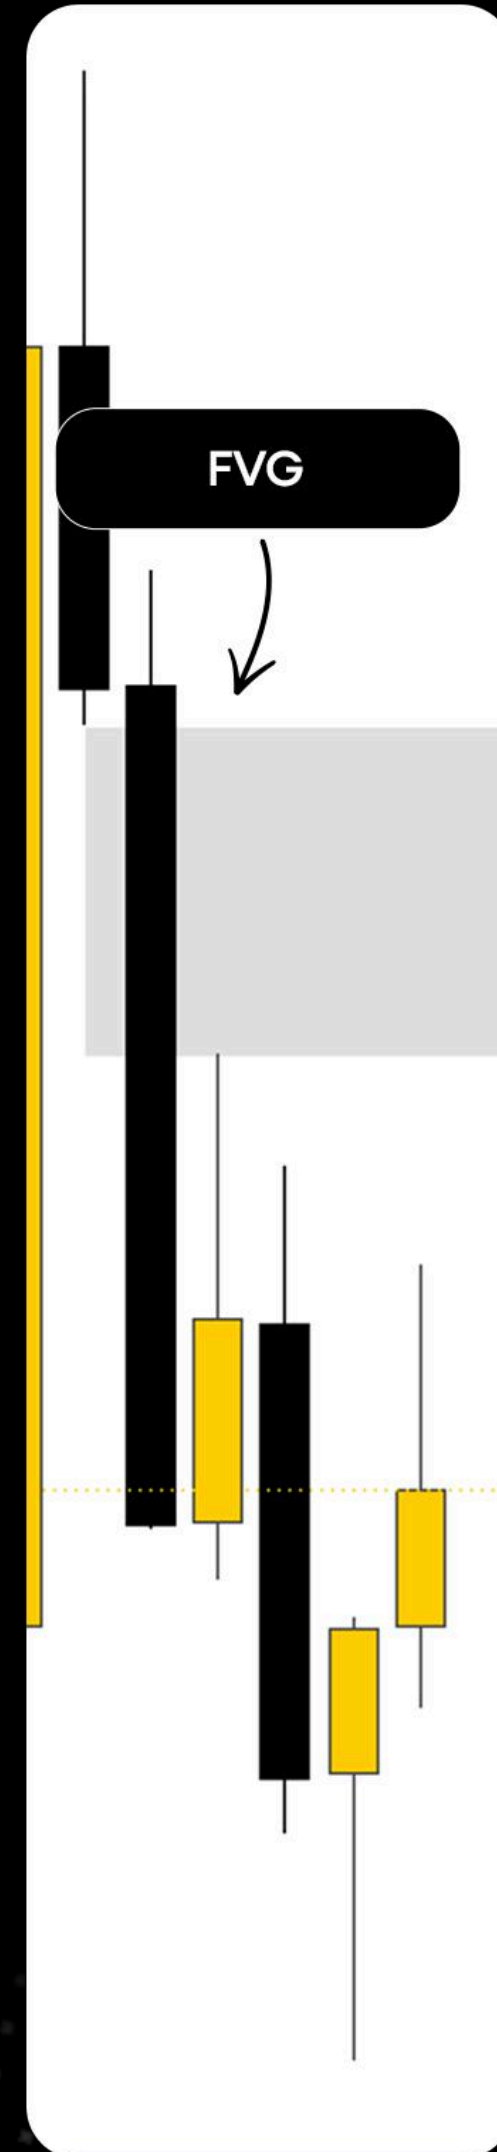

5 MIN FVGs ≈ 76% MITIGATED

30 MIN FVGs 45% MITIGATED

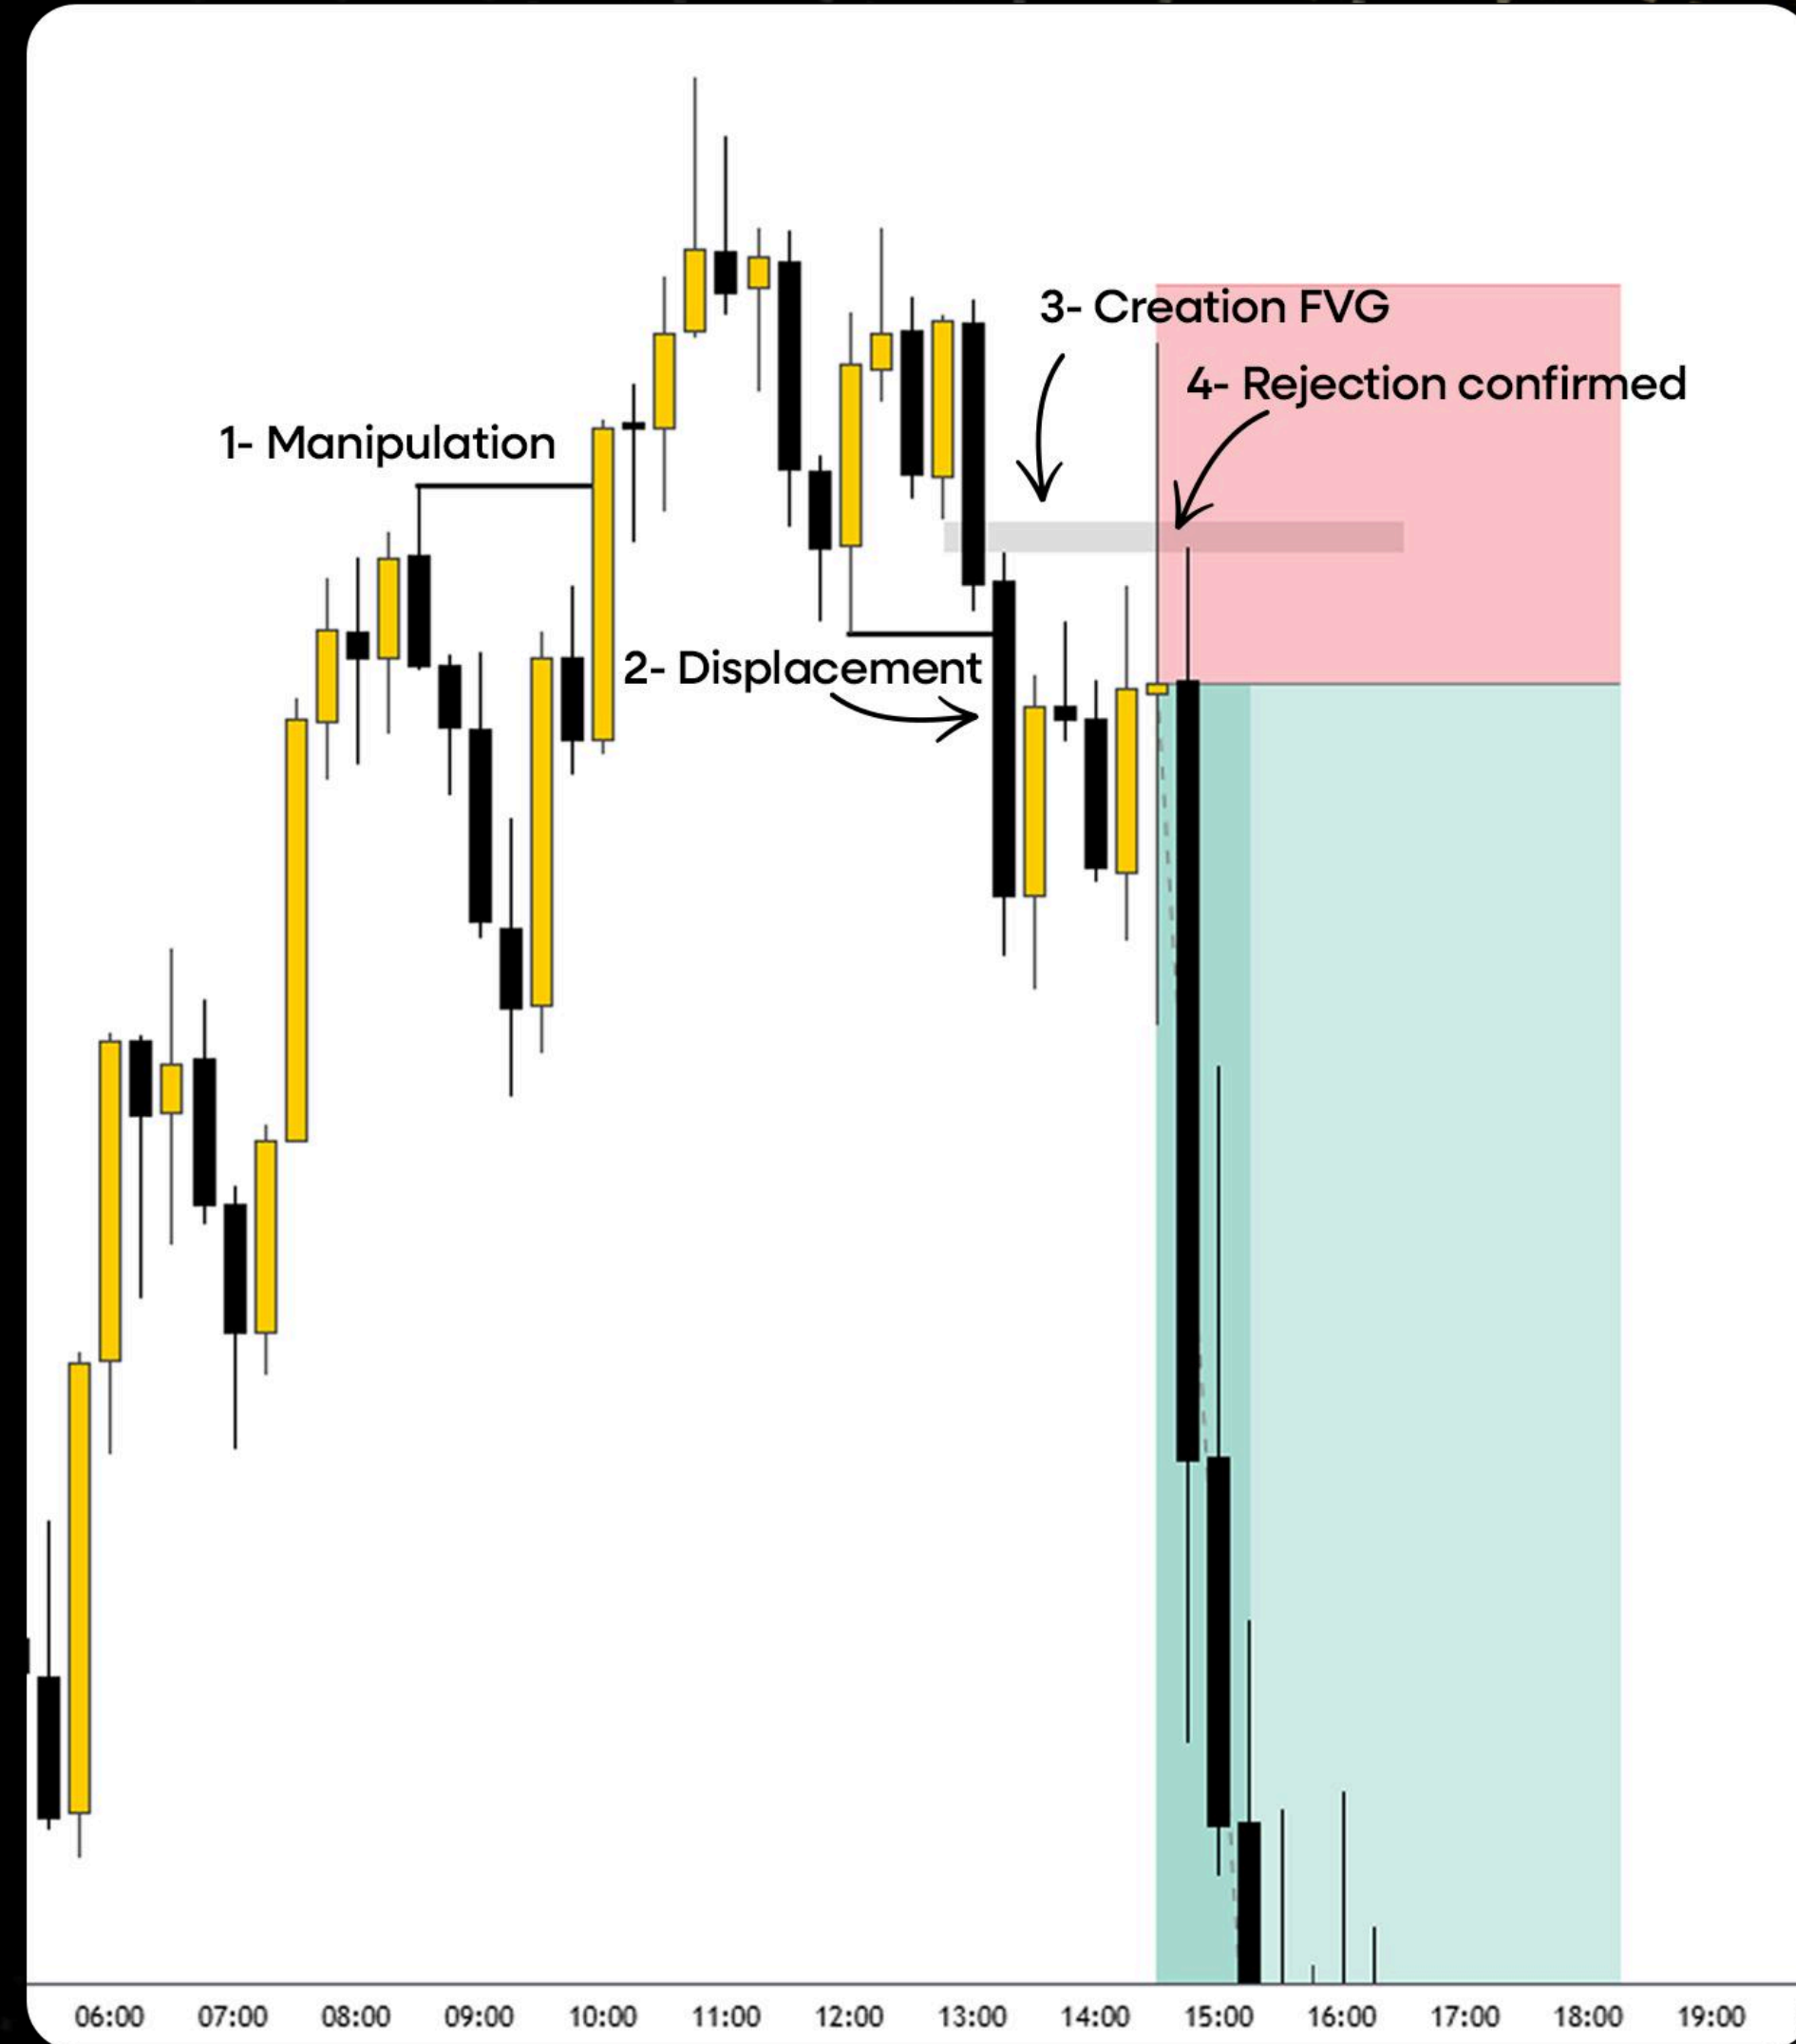

The chart shows the setup.
The data gives the edge.

Trade : Example 1

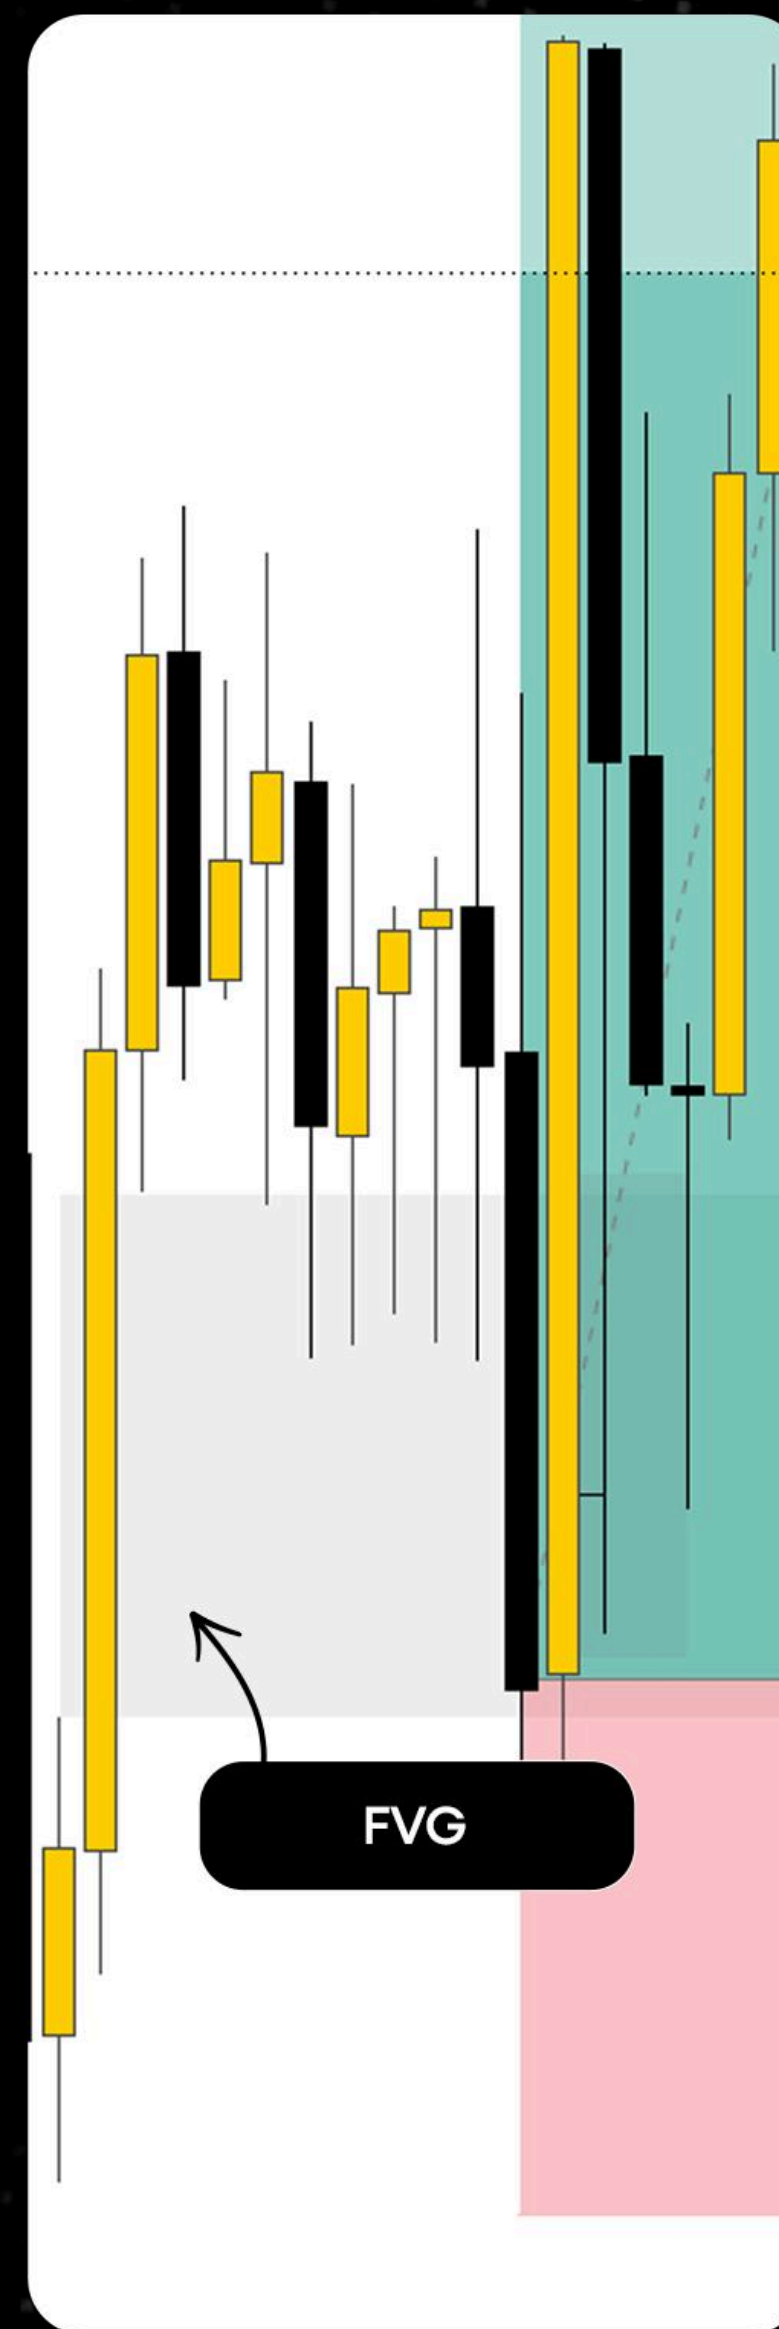

1H - FVG

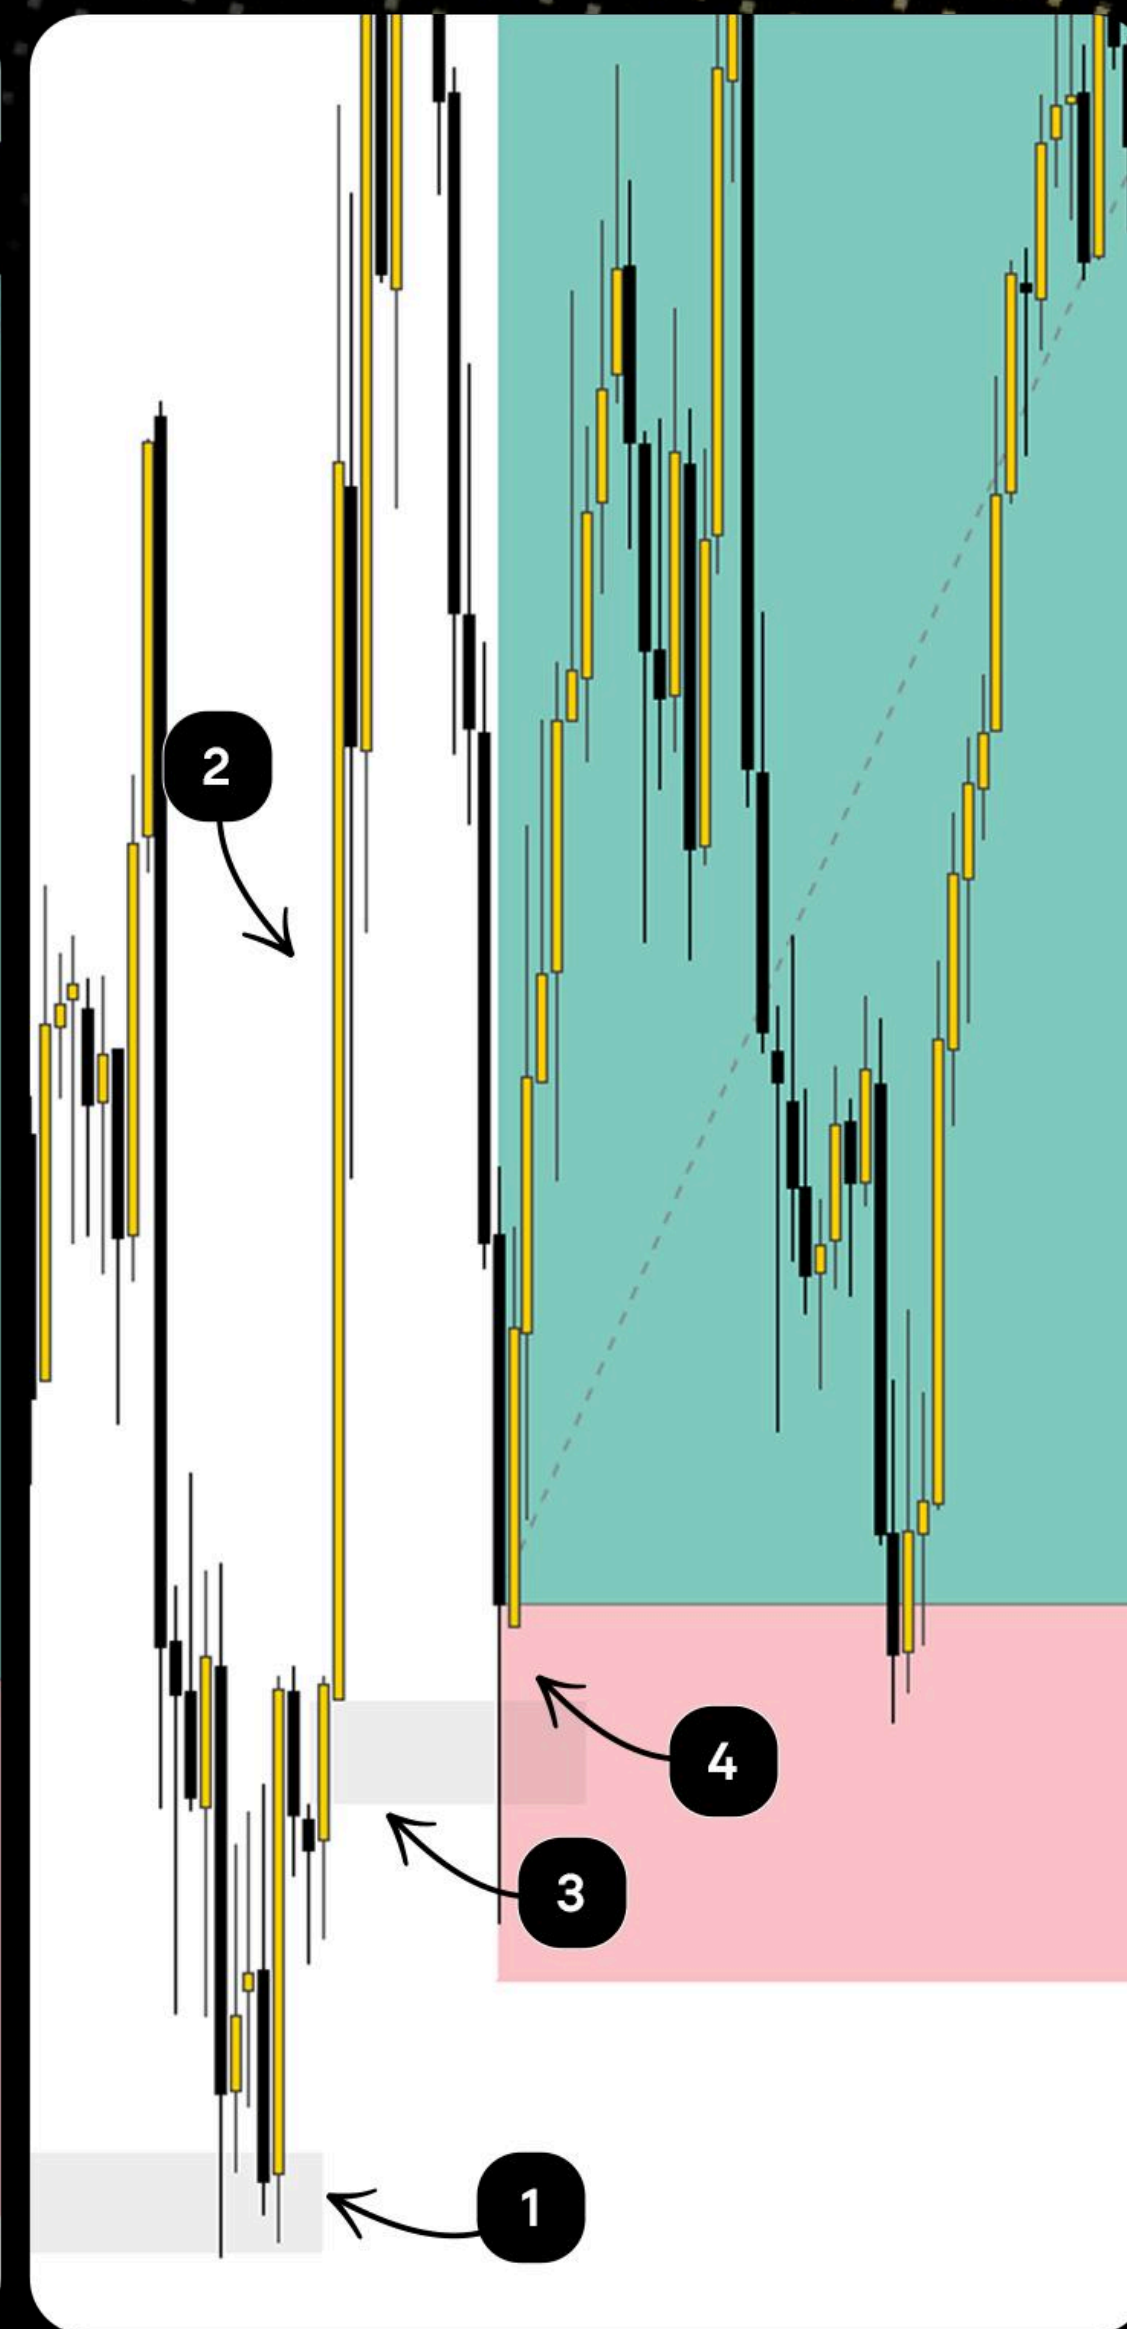

15 MINS FVG WITH ENTRY MODEL

Trade : Example 2

1H - FVG

15 MINS FVG WITH ENTRY MODEL

1- 1H FVG INTO 5MINS
FVG REACTION

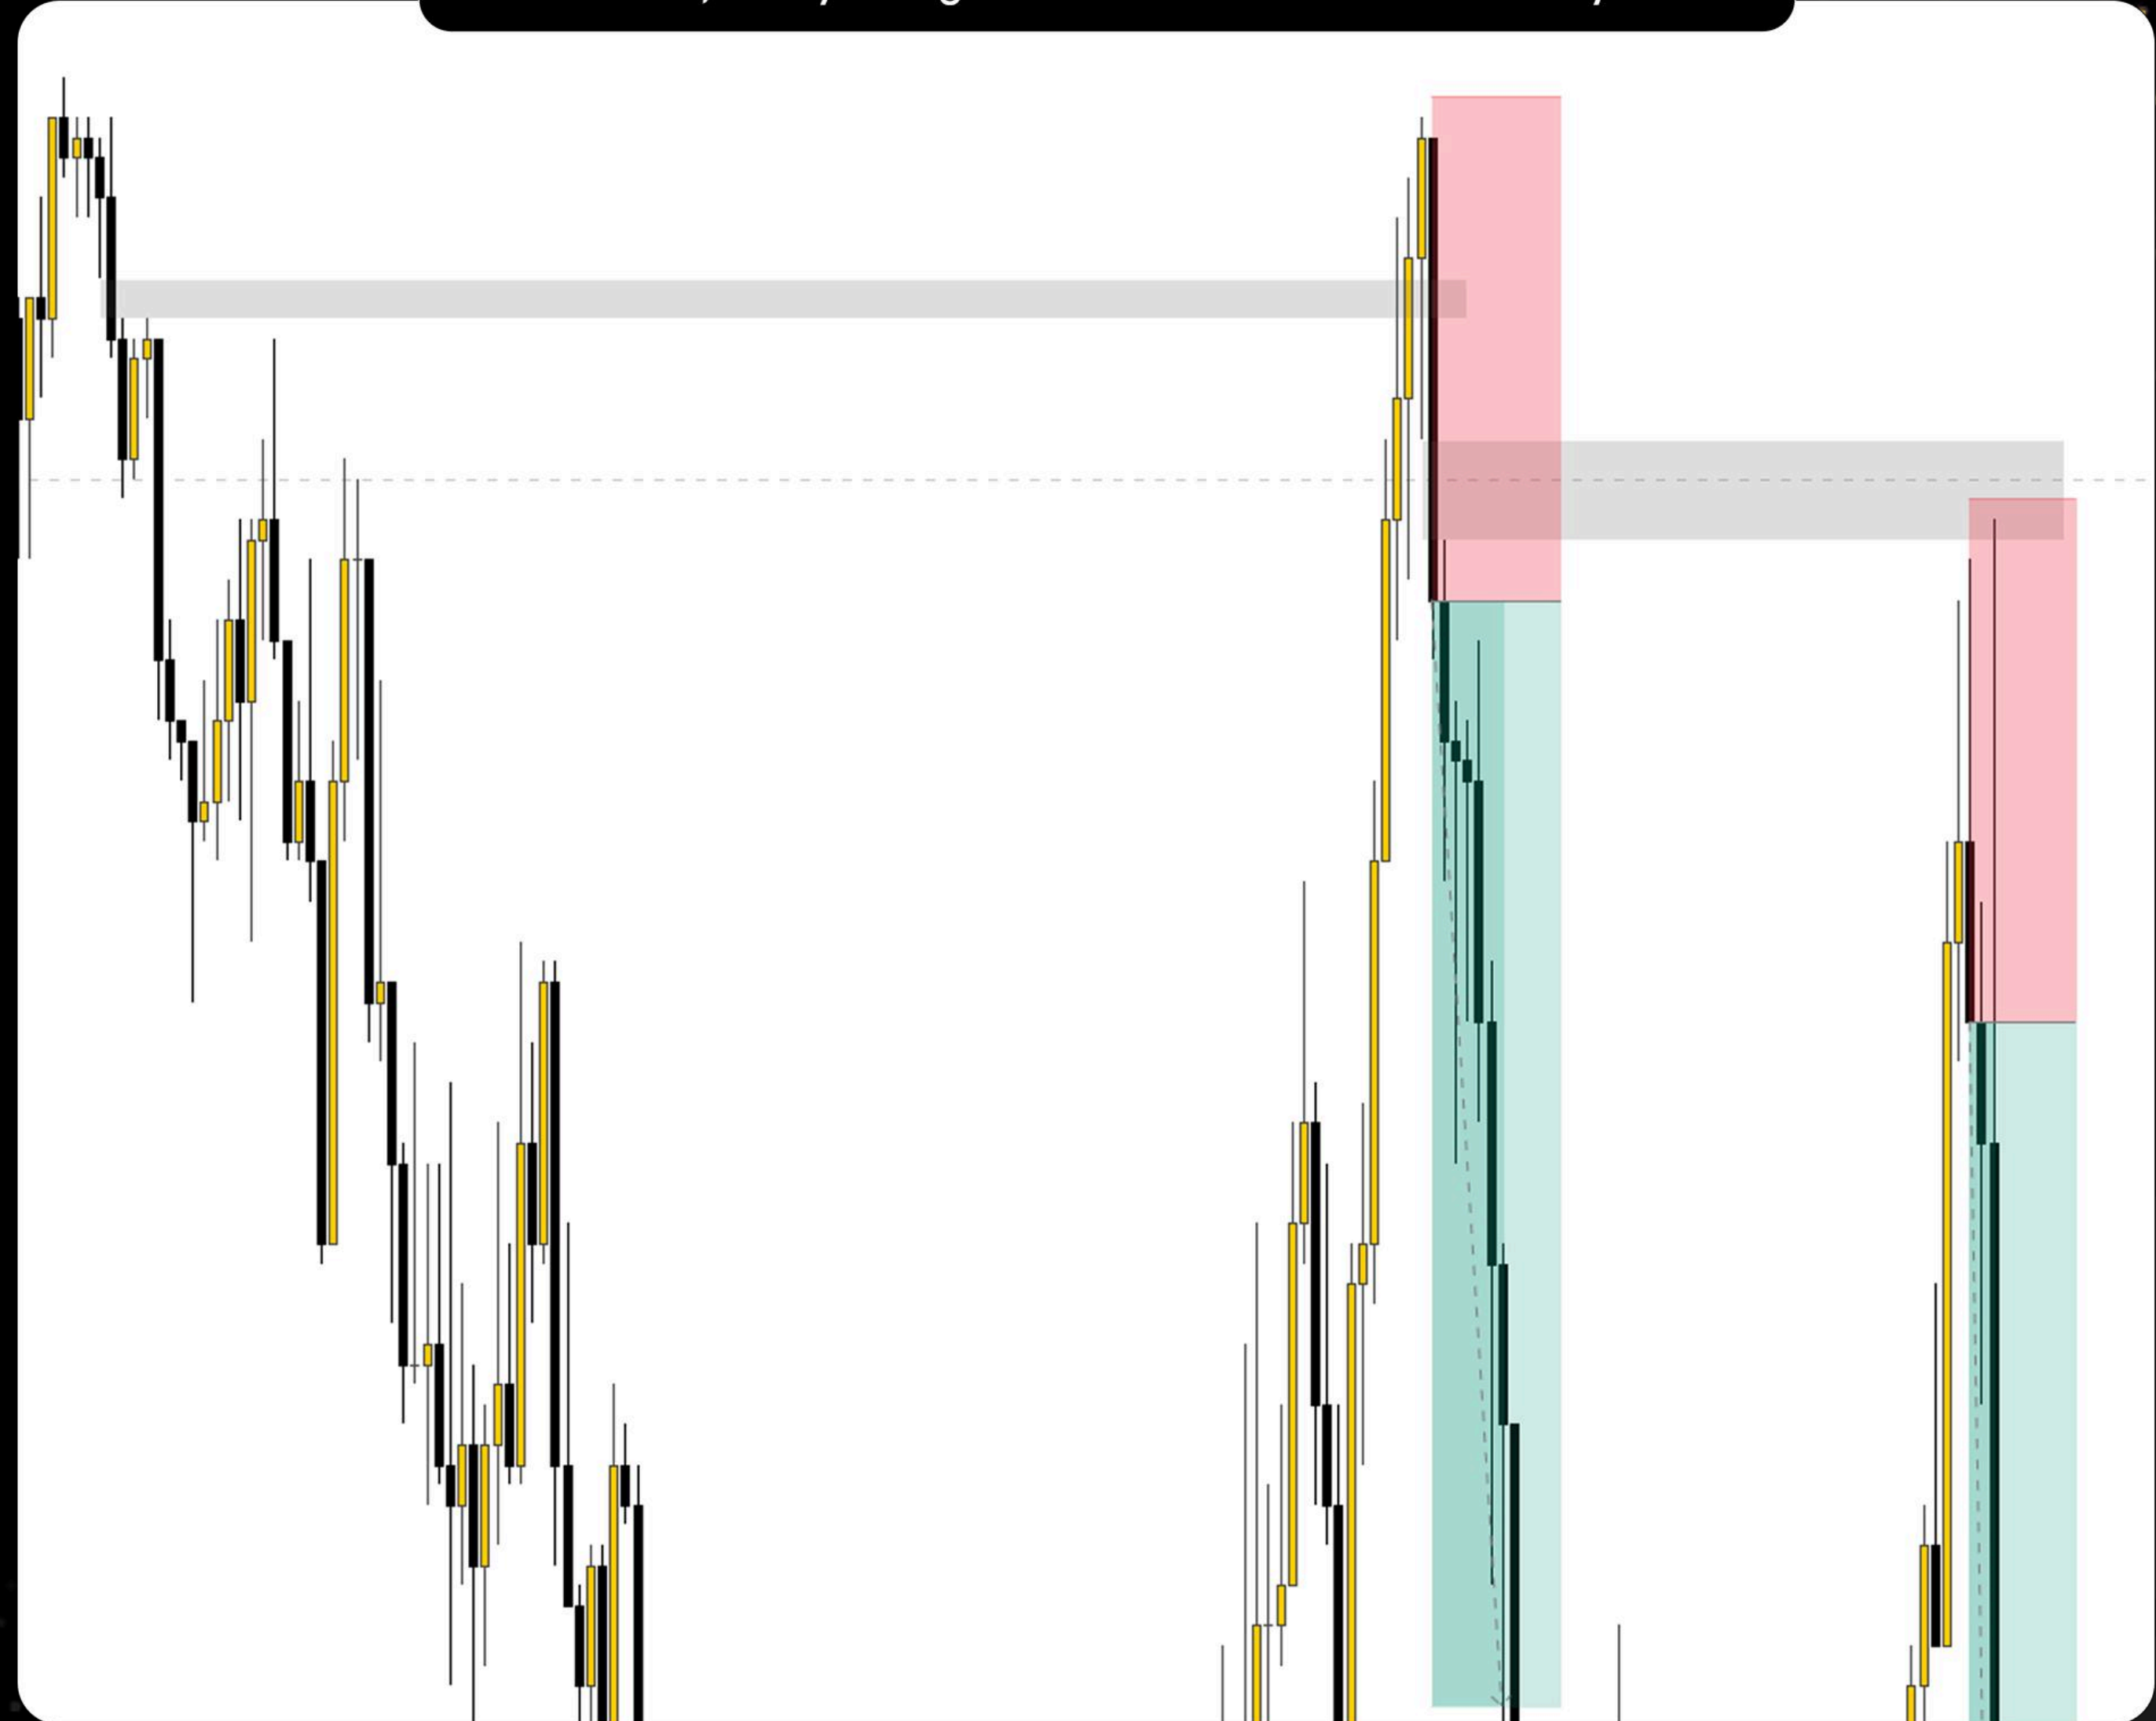

2- Displacement

3- Creation of FVG

4- Rejection from
FVG - ENTRY 1

Trade : Example 3

BUT This time, is for you to guess! Tell us in the comment what you see ?

5 MINS - EURUSD - 26TH OF AUGUST - LONDON SESSION

This is a simple entry model that starts with higher-timeframe liquidity and works down to the lower timeframes.

The goal is not only to find an entry based on liquidity, but also to use momentum, displacement and engulfing candles to potentially turn a scalp into an intraday or even swing trade.
